Langston University, a historically black university in San Antonio, she said she decided to go to Langston, play in the band, live in the dorm and for all of the years had always gotten something we looked forward to every week in the newspaper. It was not until about a year or two afterwards that Texas Tech had integrated. "And of course, everyone was talking about it," Courtney said. "And of course, Texas Tech decided that they were going to integrate." That was far removed. In the summer of 1961, it was only beginning its first steps to integration within public universities.

Her original course was to go to Langston and play for its band. "Being part of the Dunbar band," she said, "was the goal of many students at Langston and pay for its band." All of the band students for all of the years had always gotten scholarships to Langston University in Cleveland, and we were all set and ready to go," Courtney said. "But something we didn't know for sure, you couldn't find until you graduated because you knew you were going to go to Langston and play in Langston's band. So, that was my college to finish college, and the college life in Lubbock, Texas."

"It was a bit of a surprise for some of the parents, she said, as well as the students when she started school. It was a little bit overwhelming because that Tech allowed African-Americans to apply for residence halls, to participate in the athletics, and to graduate and have the diploma. But it was not an easy one. In parts of the South, many southern African-Americans sided with the Republican Party. In 1946, Sweatt, wanted to be admitted into the University of Texas. But in 1946, Sweatt sued the University of Texas. He was denied because "the court held that the University of Texas was not an equal educational opportunity for African-Americans." Instead, he decided to attend the University of Texas. He became president of the University of Texas in 1956. Theophilus Painter was the president of the University of Texas at Lubbock.

So, one of the first hold- ing cards for that is seeing African-Americans enter a career Tech. The same would happen in 1950.

In 1953, Thomas James Graves, an African American man who would later become the first African-American student to attend Tech and was someday to become the author of The Southwest Collection, went to study at Tech and was immediately confronted with the decision of the Supreme Court in Brown vs. Board of Education of Topeka, Kansas.

But Graves was no stranger to the civil rights movement. He had been involved in the movement from the very beginning, and he knew what he was getting into when he decided to enroll at Tech. He was aware of the challenges he would face, and he was prepared to meet them head on.

"I knew what I was getting into when I decided to enroll at Tech," he said. "I knew I would face challenges, but I was determined to overcome them."
Madonna faced questions in adoption process

By AYANA REDDY

“Why can’t I adopt?” was the question that ultimately led to Madonna’s decision to adopt children from Malawi, a country in sub-Saharan Africa, according to a recent interview with the Malawian carer. Madonna’s adoption process was underway, but she was still not sure if she could move forward with it.

“Madonna was very concerned about the welfare of the children and the implications this might have for their future,” the carer said. “She was very proactive in seeking the adoption, but also aware of the implications that any such proceeding would have.

“The petitioner is a professional performer and

Racism evolves in Lubbock

By DICKIE Ripple

“Time is fleeting, and racism does not go away,” said Johnny Scott, visit Larrionda, Lubbock’s Department of the Tech Student Council.

“We have learned that racism is not just black and white, but also has many shades and colors. It is embedded into our society, and it is in need of more attention.”

Scott said. “Our school has made many strides in reducing racism, but we still must personally confront it and work to make it better.”

“We all are so used to the way things are, but it’s important to remember that progress is being made,” Scott said. “Despite the substantial challenges, there is reason for optimism.”

The city continues to do best to reach out and connect to the people, despite these difficult conversations about our divisions.

“Timeary the problem is that we need to find a way to get through to our community,” said Scott. “We need to work on understanding and building bridges.”

The Clark Doll test is an important tool in understanding how racism operates in society.

“The most important step in reducing these issues is to simply confront them and talk about them in order to advance a truly mutual respect,” Scott said. “He believes that has
