SEARCH

IOP Director Search Down to Four Finalists

BY MILES J. HERSZENHORN, ASHER J. MONTGOMERY, AND THOMAS J. METE CRIMSON STAFF WRITERS

The search for the next director of the Harvard Kennedy School's Institute of Politics has narrowed to an initial shortlist of four finalists, according to five people familiar with the student deliberations.

The finalists — former U.S. Representative Val V. Demings, former Transportation Secretary Anthony R. Foxx, former U.S. Representative Stephanie N. Murphy, and interim IOP Director Setti D. Warren — sat for interviews earlier this year with current and former IOP Student Advisory Committee members.

Harvard Kennedy School Dean Douglas W. Elmendorf continues to search for a successor to former IOP Director Mark D. Gearan '78 after he unexpectedly departed in August 2022 to serve a second stint as president of Hobart and William Smith Colleges.

Foxx emerged as the clear favorite among the students after interviews with all finalists were completed, according to four people familiar with the deliberations. Despite demonstrating some unfamiliarity with the IOP, Foxx won students over with his enthusiasm for the role, the sources added. Students ranked Demings' candidacy as the weakest among the four candidates because of a perceived lack of clarity in her vision for the IOP, according to four people familiar with the deliberations. HKS spokesperson Sofiya C. Cabalquinto declined to

ing the 2023-24 academic year, marking the first time the University will offer the language. The initial appointment is for a three-year term.

Mass General Brigham, Hospital Trainees Spar Over Union Drive

UNIONIZATION BATTLES. Mass

General Brigham and trainees seeking unionization are at the center of a monthslong dispute.

BY CAM E. KETTLES

fter beginning to collect union cards for official recognition in November, residents and fellows at Mass General Brigham received a surprise announcement via email: a bonus of \$3,500 for the 2022 academic year.

When organizers launched their public unionization campaign in late February, MGB administrators sent a slew of emails: one on March 2 announcing a 10 percent salary raise, an increase of the annual stipend to \$10,000, and expanded benefits; two on March 7 warning against the unionization effort; and one on March 16 disputing organizers' talking points.

"We respect the fact that some of you have had questions about the union. We are always open to your questions," read a March 7 email signed by 30 of MGB's department chairs. "However, it's our hope that we can move beyond those questions, so that we can focus all our available energy on our educational programs and see what we can achieve by working together."

In a March 16 email, MGB Interim Chief Academic Officer Paul J. Anderson and Vice President of Education J. Kevin Tucker sent residents and fellows two documents arguing against unionization.

"If there were ever a time not to sign a union card, that time is now," one handout stated.

MGB leadership have made the case to housestaff that working directly with the administration is preferable to union bargaining.

"Your entire relationship with Mass General Brigham—including program and education leadership – would change, and in many ways you might not like," their website reads.

The unionization campaign, named MGB Housestaff United, hopes to file for a union election by the end of the academic year.

Mass General Brigham, which includes both Brigham and Women's Hospital and Massachusetts General Hospital, employs more than 2,500 residents and fellows, otherwise known as housestaff. Many of its member hospitals are teaching hospitals affiliated with Harvard Medical School.

MGB Housestaff United is affiliated with the Committee for Interns and Residents, a local of the Service Employees International Union. The CIR represents roughly 22,000 housestaff nationwide.

"We have shared experiences working for this large hospital system that really led us to want to form a union," said Kayty E.W. Himmelstein, organizing committee member and Infectious Disease Fellow.

MGB Housestaff United are asking workers to sign union cards that indicate they support unionization and authorize the CIR to act in their interests.

If a majority of housestaff sign cards, MGB Housestaff United can ask hospital administrators for voluntary recognition. If more than 30 percent of eligible workers sign cards, MGB Housestaff can file for a union election conducted by the National Labor Relations Board to be officially recognized even if MGB doesn't voluntarily recognize them.

Organizers said they did not begin their card campaign until they were confident that they had support from a majority of MGB housestaff.

"We spoke to over a thousand people who verbally told us like, 'Yes, I think I would support this campaign if you were to get to the point where you had an election," said Sascha N. Murillo, organizing committee member and a third-year Internal Medicine resident.

'A Seat at the Table'

Citing compensation, workplace safety, and burnout prevention as top priorities, MGB Housestaff United organizers seek greater employee representation in decisions that affect them.

"The union was formed out of a desire for us to have a seat at the table to talk about what working conditions we need, what types of pay and benefits we need, and really what our patients need as well," Himmelstein said.

COMMENCEMENT

Tom Hanks Will Address Class of 2023 Graduates

BY MILES J. HERSZENHORN AND CLAIRE YUAN CRIMSON STAFF WRITERS

Tom Hanks, an acclaimed actor and filmmaker, will speak at Harvard's 372nd Commencement in May, the University announced Tuesday morning.

Hanks will address Harvard's Class of 2023 during Commencement's Morning Exercises, which will be held in Tercentenary Theater on May 25. Hanks will also be awarded an honorary Harvard degree during the Commencement exercises.

This year's Commencement marks a return to the ordinary for Harvard. After in-person ceremonies for the Classes of 2020 and 2021 were canceled due to the pandemic, the University held two Commencement Exercises last year: one for the Class of 2022 and another joint ceremony for the Classes of 2020 and 2021.

A household name, Hanks is a Hollywood fixture credited for roles in nearly 100 films, most notably "Forrest Gump," "Sleepless in Seattle," and "Saving Private Ryan." He has won two Academy Awards — out of a total of six nominations — one Golden Globe award, seven Emmy awards, and the American Film Institute's Lifetime Achievement Award.

In 2014, Hanks received the Kennedy Center Honor. In 2016,

FED RAISES RATES BY QUAR-**TER POINT IN AN EFFORT TO CURB INFLATION, CALM** INVESTORS

After multiple bank failures, Federal Reserve policy makers voted unanimously to raise interest rates by 25 basis points Wednesday, bringing the benchmark federal funds rate to 5 percent. Chairman Jerome Powell and Treasury Secretary Janet Yellen said they would not commit to insuring all depositors in a joint panel. The Fed has now raised interest rates nine times in the past year. Expected to raise interest rates by 5.1 percentage points in 2023, the Fed will likely raise rates again this year.

GRAND JURY DELAYS VOTING ON TRUMP INDICTMENT

A Manhattan Grand Jury did not meet Wednesday on inciting former President Trump, delaying possible indictment. The Manhattan District Attorney is investigating the legality of Trump's payments to porn star Stormy Daniels via his former lawyer Michael Cohen after an alleged sexual encounter in 2006. Cohen, who paid Daniels \$13,000, said the Trump Organization falsely identified the reimbursements as legal expenses. Cohen previously pleaded guilty to related financial crimes. The grand jury expected to vote on whether to indict Trump on criminal charges early next week.

U.S. AND CANADA REACH DEAL TO TURN ASYLUM SEEKERS AWAY AT **UNOFFICIAL BORDER**

The U.S. and Canadian governments have agreed to close the unofficial border between the two countries at Roxham Road, in between New York and Quebec. The two countries previously followed the Safe Third Country Agreement, which allowed the U.S. and Canada to turn back asylum seekers from official borders, but does not include unofficial entry points like Roxham Road. Now, the officials plan to update the STCA to allow them to turn back unauthorized asylum seekers from any entry point.

TIKTOK CEO QUESTIONED BY LAWMAKERS AMID **BIPARTISAN CONCERNS**

Bipartisan lawmakers questioned TikTok CEO Shou Chew Thursday amid concerns over data privacy on the popular app. The five-hour hearing was focused on determining China's potential influence on ByteDance - Tik-Tok's parent company based in China -and how this impacts users' data and privacy. Prior to the hearing, the Biden administration said that the company could face a possible nationwide ban if Chinese owners do not share their stakes. According to the New York Times, China's commerce ministry said shortly before the hearing they opposed the sale of TikTok. Lawmakers remain concerned about data privacy violations.

TAGALOG

Harvard to Offer Tagalog Language for First Time in History

A NEW BEGINNING.

Harvard will begin Tagalog instruction at the University starting the 2023-24 academic year.

BY MADELEINE A. HUNG JOYCE E. KIM AND ELIAS J. SCHISGALL CRIMSON STAFF WRITERS

arvard will hire a preceptor to teach Tagalog, marking the first time the University will offer courses in the language.

The Department of South Asian Studies will hire three preceptors to teach Tagalog, Bahasa Indonesian, and Thai, for course offerings starting the 2023-24 academic year.

While Thai and Indonesian are currently taught at Harvard, no courses are offered in Tagalog, the fourth most spoken language in the United States.

The Harvard University Asia Center secured financial support for the positions through fundraising efforts, according to Executive Director Elizabeth K. Liao.

The positions will be threeyear term appointments for each preceptor and are renewable for up to five additional years.

James Robson, a professor of

East Asian Languages and Civilizations and director of the Asia Center, said the administration was able to get one million dollars from the Asia Center's budget to fund the Tagalog preceptor position.

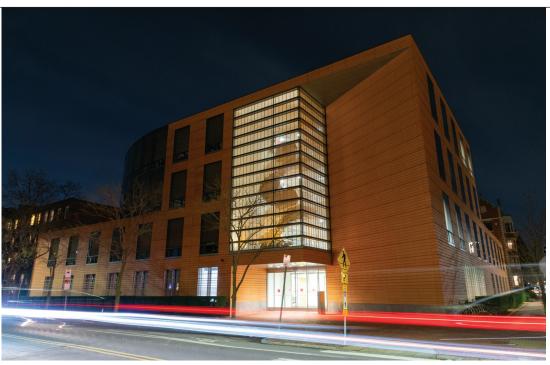

However, he added that funding the position after three years would be "probably not entirely sustainable."

"We're very excited and hopeful that these positions will be a game-changer in terms of the Asia Center's long-term mission to build Southeast Asian studies at Harvard, as well as the university's engagement with the region," Liao wrote in an email.

Currently, Harvard does not have a Southeast Asian Studies department. In the 2022-23 course offerings, the Faculty of Arts and Sciences offers one course on the Philippines, which is a survey course of the history of Southeast Asia.

Robson said the Asia Center has spent more than two years working to increase education about Southeast Asia at the University.

"What I'm hoping is that if we can demonstrate that there's demand for these languages and students show up and are excited about it, then hopefully we can also use this to convince the ad-

The Harvard University Asia Center is located in the Center for Government and International Studies, South Building. ZENNIE L. WEY—CRIMSON PHOTOGRAPHER

ministration to further support Southeast Asian studies generally and language instruction in particular," Robson said.

Jorge Espada, associate director for Southeast Asia Programs at the Asia Center, said his team noticed a lack of Southeast Asian studies and language course offerings when they conducted a survey of all such resources at Harvard.

"Most Southeast Asian languages are taught as part of a tutorial format within the Department of South Asian Studies," he said.

"We wanted to see if we could have these languages taught by a preceptor-level position to professionalize the instruction, to make it more consistent, and to generate enthusiasm for it at Harvard."

Eleanor V. Wikstrom '24, co-president of the Harvard Philippine Forum and a Crimson Editorial chair, said getting Tagalog offered has been one of the goals for "as long as HPF has been in existence."

HPF has petitioned Harvard administrators to offer courses in Tagalog, according to Wikstrom. In 2021, Wikstrom wrote an op-ed in The Crimson criticizing the lack of offerings in the Ta-

t galog language at Harvard. -- She said she received push-

back for her advocacy efforts and questions about the value of learning Tagalog.

"We're working against a historical memory that is actively erasing the understanding of the importance of the Filipino-American relationship," Wikstrom added.

HPF Co-President Marcky C. Antonio '25 said securing Tagalog course offerings at Harvard was "a big win for the Filipino community back home," adding that he hopes it will spur more academic exchanges between Harvard and the Philippines.

Although Antonio said he felt "elation" at the news of hiring a Tagalog preceptor, he also felt a "sense of hesitation."

"While this is the first Tagalog language course that's ever been offered in Harvard's history, I think there's also this sense that we need to make sure we teach this right — not only Tagalog language, but Filipino culture as a whole," he said.

John U. Ficek '25 said he wanted to learn Tagalog when he first arrived at Harvard, but he was "surprised" to learn that it was not offered.

He said a Tagalog class would

IOP FROM PAGE 1 IOP Director Search Down to Four Finalists

comment on the finalists or a timeline for the search.

Foxx and Demings did not respond to multiple requests for comment Thursday.

Murphy and Warren were both seen as viable candidates in students' evaluations, ranking between Foxx and Demings, sources said.

Murphy also did not respond to a request for comment.

In an interview with The Crimson last month, Warren said he "would love to be the next director" of the IOP. Warren reaffirmed his desire to remain in the role fulltime when asked about his candidacy Thursday afternoon.

Interim Institute of Politics Director Setti D. Warren, pictured at a February interview, is a finalist for the permanent role.

All four finalists have served in elected office and boast resumes with lengthy careers in public service

Foxx served as the mayor of Charlotte, North Carolina, before he was tapped to join President Barack Obama's cabinet in 2013. Last spring, Foxx was a contender to lead the White House Office of Public Engagement in the Biden administration.

Demings, a four-term U.S. Representative from Florida, unsuccessfully challenged incumbent Senator Marco Rubio (R-Fla.) in last November's midterm election. Prior to entering politics, Demings worked in law enforcement for 27 years, becoming the first woman chief of Orlando Police Department.

Warren served as mayor of Newton, Massachusetts, from 2010 to 2018, before he was hired as executive director of the IOP in 2021. After Gearan's departure last summer, Warren was named IOP interim director.

Murphy, a three-term U.S. Representative, served as a member of the Houses Jan. 6 Select Committee and opted not to seek reelection last November to spend more time with her family. Before running for Congress, Murphy spent four years as a national security specialist for the U.S. Department of Defense. In a December 2022 interview, Elmendorf explained that - unlike faculty appointments — the search for the next IOP leader does not involve a formal committee. Instead, Elmendorf is consulting with Kennedy School affiliates, undergraduates, and members of the IOP's Senior Advisory Committee before making the final selection. "We want a leader of the IOP who is very comfortable with senior public figures and very comfortable sitting in a dining hall, talking with students," Elmendorf said in December.

Harvard Creates Policies on Bullying, Discrimination

BY DARLEY A. C. BOIT AND MILES J. HERSZENHORN CRIMSON STAFF WRITERS

Harvard released final versions of the school's first University-wide non-discrimination and anti-bullying policies on Wednesday, establishing resolution procedures for discrimination and harassment complaints across the school for the first time.

The policy changes, sent to Harvard affiliates Wednesday afternoon by University Provost Alan M. Garber '76, largely resemble draft versions of the policies Harvard released last April. The Harvard Corporation — the University's highest governing body—approved the changes last December following a comment period that concluded in September 2022. The policies are set to take effect Sept. 1, 2023.

The announcement comes more than two years after Garber

established a committee and convened three working groups in January 2021 to review Harvard's sexual misconduct, discrimination, and bullying policies. The working groups were established as a result of an agreement between Harvard Graduate Students Union-United Automobile Workers and the University in the union's first contract.

Garber's Wednesday announcement did not include the final version of Harvard's updated sexual harassment and misconduct policies, which Harvard will finalize after the Biden administration releases updates to its Title IX regulations on how educational institutions handle sex and gender-based discrimination complaints. The federal updates are expected to come in May.

Still, Harvard intends to have its updated Title IX and sexual misconduct policies take effect on Sept.1—alongside its non-discrimination and anti-bullying policies — pending implications of the revised Title IX rules, according to University spokesperson Jason A. Newton.

Harvard currently prohibits discrimination on the basis of several legally protected identifying characteristics, including race, religion, and national origin.

The new non-discrimination policy broadly defines discrimination as "adverse treatment of an individual" based on one or more of a set of defined "protected characteristics."

The final list of protected characteristics includes "political beliefs," a category that was left out of the draft policies released last year.

The released anti-bullying policy, however, does not limit its protections to a defined list of characteristics, instead defining bullying as "harmful interpersonal aggression by words or actions that humiliate, degrade, demean, intimidate, or threaten an individual or individuals."

Both proposed policies include informal and formal resolution procedures for discrimination and bullying complaints. Individuals seeking to file a discrimination or bullying complaint can only remain anonymous under informal procedures.

To file a formal complaint, an individual must submit a written description of the alleged discrimination or bullying to designated officials in each school or a central office tasked with overseeing the policies. An individual seeking informal resolution should first consult the designated officials in the appropriate school, except if they object on the grounds of "alleged conflict of interest or bias," in which case they may bring the matter to the central office.

The policy also notes that an

informal complaint "does not automatically launch an inquiry or investigation."

The structure and staffing of the central office are currently in consideration and have not been finalized, according to Newton.

In his Wednesday email announcement, Garber wrote the policies are designed to ensure Harvard affiliates feel "truly welcome to participate in the full range of University life."

"We know that policies and procedures alone cannot cultivate the kind of culture and community we aspire to," Garber wrote. "They play an important role by setting basic standards. But we can and must do more, treating each other with respect and dignity and fostering an environment at Harvard where everyone can thrive and do their best work.

Woman's Ice Hockey to Face Investigation After Abuse Allegations

BY PATON D. ROBERTS AND SOPHIA C. SCOTT CRIMSON STAFF WRITERS

Harvard Athletic Director Erin McDermott announced in a March 14 email that Harvard Athletics will conduct an independent, external review of the women's ice hockey program following allegations of abuse leveled against the program and embattled head coach Katey Stone.

Harvard has retained New York law firm Jenner and Block to investigate the allegations against the hockey program. Katya Jestin, co-managing partner of the firm, is leading the inquiry. Jestin is a former assistant U.S. attorney and a specialist in institutional culture investigations.

Over the course of 27 seasons coaching Harvard women's ice hockey, Stone has garnered more wins than any other female coach in the history of women's college ice hockey. But this year, Stone has faced allegations of abusive behavior, with the first reports published by the Boston Globe in January.

In an investigation by the Athletic published March 10, Stone is accused of turning a blind eye to hazing, using abusive language against players, and running the team like a "mental-health Hunger Games."

Through interviews with 30 former players and team associates, the Athletic reported that players were subjected to a fining system based on what they wore or ate — including a "gay tax" or an "Asian tax" — and freshmen were told to complete a "Naked Skate" that left them with "ice burns and bleeding nipples."

Players were also hazed during an annual "Initiation Week," the Athletic reported, which alumni attended in some years. The Athletic did not report that Stone was directly involved in the fining system, the "Initiation Week," or the "Naked Skate," but Stone allegedly downplayed injuries, made insensitive remarks, and contributed to a negative team culture over her tenure.

In the Athletic's report, generations of Stone's players characterized the program as pushing "the boundaries of acceptable treatment of athletes."

Stone did not respond to multiple requests for comment. Harvard spokesperson Rachael Dane declined to comment on the investigation or the allegations against Stone.

In an interview with The Crimson last month, McDermott declined to comment on the allegations against Stone.

But after the Athletic investigation's release, on March 14, McDermott emailed all Harvard student-athletes "regarding the concerning reports that we have received through media outlets and others about our women's ice hockey program."

"The most important job I have as Director of Athletics is protecting student-athlete health and safety," McDermott wrote. "It is also paramount to our culture and community for all to be treated with dignity, and respected as individuals. The conduct alleged does not represent who we are as a Harvard Athletics community. There is no place for behavior that creates peer pressure, humiliation, or physical and emotional harm."

"This is a good time for reflection, and I encourage all of us student-athletes, coaches, athletic trainers, administrators, alumni/ae — to commit to our values and live consistently by them through our actions and words," McDermott added.

On Jan. 27, the Globe published an investigation detailing allegations against Stone from 16 former players, who described a pattern of disregard for physical and mental well-being of athletes, body-shaming, hazing, and insensitive remarks.

The Globe report prominently described an incident where Stone said the team had "too many chiefs and not enough Indians" after a loss to Princeton in the Eastern College Athletic Conference playoffs last February.

The remark led to a review of the program, announced in an April 8, 2022, email by McDermott.

But in July, McDermott wrote that Stone would continue to coach the team.

According to the Athletic, ahead of the Globe investigation's publication, McDermott spoke at the HH Dinner — an alumni weekend event attended by about 50 people this year, including many of Stone's former and current players as well as employees of Harvard's athletic department.

There, McDermott lauded Stone's work and legacy in a speech, and Anne Holland "Holly" Johnson '96, former captain and member of Stone's first team, told attendees the program's reputation is sacred, according to the Athletic.

The Athletic reported to some players and alumni, the event felt like "an effort to galvanize support for Stone and rally people to push back against any criticism to come."

Stone spoke separately to a group of former players in the team's locker room during the gathering, the Athletic reported.

"They're trying to light this program on fire," Stone said, according to the Athletic. "And we're not going to let that happen."

FACULTY

Quantum Physicist Mikhail Lukin Appointed University Professor

BOLD IDEAS, QUAN-TUM LEAP. Pioneering quantum physicist Mikhail Lukin will become a University Professor, the highest faculty rank.

BY RAHEM D. HAMID AND ELIAS J. SCHISGALL CRIMSON STAFF WRITERS

uantum physicist Mikhail Lukin has been appointed a University Professor, Harvard's highest faculty rank, the University announced Tuesday.

Lukin will become the Joshua and Beth Friedman University Professor on July I, replacing former chemistry professor Charles M. Lieber, who quietly retired last month after being convicted of lying to federal investigators in 2021.

In a Thursday press release, University President Lawrence S. Bacow said that Lukin is "central to the University's ambitions in quantum science and engineering."

"He produces work that is not only elegant and beautiful, but also enormously promising in its capacity to create innovations that are likely to change many of our lives," Bacow said. "It is a pleasure to welcome one of the best quantum information scientists in the world into the ranks of the University Professor."

In an email, Lukin said he was "deeply honored" to be selected among his "truly amazing, incredibly accomplished colleagues" at Harvard.

"I found out about this very re-

cently and to be honest did not have [time] to either fully digest the news or think about if and how this can change my research in the coming years," Lukin wrote. "But I can tell you that it is a very special time in our field and Cambridge is [a] very special place right now."

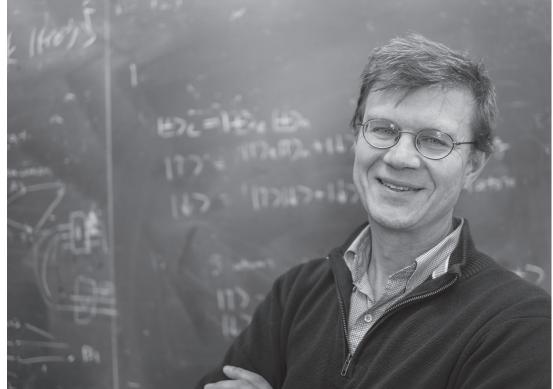

First established in 1935, the University Professorship allows its appointees to teach at any of the University's 13 schools.

Lukin's post was established in 2017 by Joshua S. Friedman '76 and Beth C. Friedman, most recent among all University Professorships.

Lukin's appointment follows the naming of three scholars to University Professor at the beginning of this year. Lukin will join 24 other University Professors, including President Emeritus Lawrence H. Summers and President Emerita Drew G. Faust.

Lukin graduated from the Moscow Institute of Physics and Technology summa cum laude in 1993 with a degree in applied physics and mathematics, and received his Ph.D. in physics from Texas A&M University in 1998. He first came to Harvard as a postdoctoral fellow in 1998 before starting as an assistant professor in the Physics Department in 2001. He is also a member of the National Academy of Sciences and a co-founder of two startups that work with quantum technol-

At Harvard, Lukin directs both the Harvard Quantum Initiative in Science and Engineering and the Harvard-MIT Center for Ultracold Atoms, along with the Lukin Group, his research

Quantum physicist Mikhail Lukin will become a University Professor, Harvard's highest faculty rank, on July 1. COURTESY OF SOPHIE PARK/HARVARD UNIVERSITY

lab.

His work is focused on quantum optics and atomic physics, which deals with controlling photons, electrons, and atoms in quantum systems. His research also touches on quantum information science — the application of quantum mechanics to computer science and information science.

"We are trying to build new kinds of quantum machines and understand if and how they can be used to advance both cutting edge scientific frontier and to solve practical real world problems," Lukin wrote in his email. "This is one of the most exciting fields in science and engineering."

The University has recently launched multiple new initiatives in quantum science, including starting one of the world's first Ph.D. programs in the field and partnering with Amazon Web Services to drive research and innovation in quantum networking.

"At Harvard we have a truly extraordinary community that includes an exceptional group of students, postdocs, and faculty that closely collaborate across many departments and Schools, making it a very special place to do this work," Lukin said in the University's press release.

"With this professorship, I hope to be able to help elevate this work even further by bringing together scientists and engineers to explore new scientific directions, make new discoveries, and realize applications that address the biggest challenges facing the world," he added.

commencement page 1 Tom Hanks to Speak

NEWS

former President Barack Obama awarded him the Presidential Medal of Freedom.

Harvard University President Lawrence S. Bacow called Hanks a "true master of his craft" in a press release.

"Over five decades, he has entertained, enlightened, and befriended us," Bacow said. "In addition to his brilliance as an actor, Tom has demonstrated both an innate empathy and a deep understanding of the human condition."

"I very much look forward to his address in May," he added.

After winning his first Academy Award for Best Actor in "Philadelphia," in which Hanks played a lawyer who was diagnosed with AIDS, Hanks became a longtime supporter of AIDS awareness and research.

Hanks also serves on the board of governors for the National Space Society and was awarded the Douglas S. Morrow Public Outreach Award from the Space Foundation for his support of space exploration. He is also the campaign chair for Hidden Heroes, an organization dedicated to supporting military caregivers.

Hanks' selection marks a departure from government officials who have recently spoken at Commencement, including Attorney General Merrick B. Garland '74 and former New Zealand Prime Minister Jacinda Ardern in last year's dual Commencement ceremony. Hanks is the first person from the entertainment industry to deliver the Commencement address since filmmaker Steven Spielberg — a frequent collaborator of Hanks — spoke in 2016.

Mass General Brigham, Hospital Trainees Spar Over Union Drive

Organizing committee members pointed to the Covid-19 pandemic as the catalyst of the push toward unionization, saying that many employees had limited access to personal protective equipment and little say over reassignments to treat Covid-19 patients.

"Covid really exposed a lot of the vulnerabilities that residents and just healthcare personnel in general face around workplace safety and just our general working conditions," said Murillo, the third-year resident.

Compensation is especially important to housestaff due to the cost of living in Massachusetts and rising inflation, she added.

"I'm at MGH, and we're in Beacon Hill, which is incredibly expensive," Murillo said. "I know my fellow co-residents are spending over half of their paycheck just to have a place to sleep, which is insane for people who have upwards of \$300,000 in debt." In April 2020, MGB created the House Staff Council to address concerns from residents and fellows. Elected representatives of each department could bring forward concerns to MGB's General Medical Education Committee.

Third-year Internal Radiology resident and organizing committee member Diego B. Lopez '13, who was originally part of the House Staff Council, said that while organizers initially tried to get concerns addressed there, "people just kind of gave up because it wasn't going anywhere."

While Brigham and Women's Hospital has maintained a housestaff council since 2017, the broader MGB council ended after two years.

Lopez says that while some concerns could be addressed through the MGB Education Committee, the majority of concerns were "not something the GME committee can address" be-

cause the concerns did not pertain to education.

He added that members of the House Staff Council were never able to meet with the Human Resources department or "anyone in administration that actually handled training" during his time on the council.

In fall 2022, the Mass General Brigham Education Operations Coordinating Committee was created to address operational difficulties related to education.

Anderson, the interim chief academic officer, wrote in a statement that the residency program "provides well-rounded support to ensure a meaningful experience, professionally and personally."

An MGB spokersperson wrote in an emailed statement on March 17 that hospital administrators view working directly with trainees as the best way to meet employees' needs.

Himmelstein said the forma-

"Unlike a house staff council, a union is a legally recognized body that the employer is required to negotiate with," Himmelstein said. "I think we feel that in order to have our concerns addressed in a meaningful way, we really need that legal mandate for our employer to meet with us and talk about our concerns."

'A Really Coordinated Effort'

MGB Housestaff United began quietly collecting cards in November, months before launching publicly in late February.

"Mostly we've just been trying to talk to as many residents as possible," Murillo said. "Our unit would be like 2,600 people, so we wanted to make sure we had a good base of support."

On their website, MGB described organizers as "encouraging or pressuring others to join their effort."

Since October 2021, according to Lopez, housestaff have been receiving emails from hospital administrators expressing appreciation for residents.

"It's very, very common to see these kinds of things during this phase of the campaign when things are still technically underground, although the employer is very obviously well aware of what's going on," said Annie Della Fera, a communications coordinator for CIR, MGB Housestaff United's parent union.

In addition to the \$3,500 bonus, the increased annual stipend, and the 10 percent salary raise — which includes a 7.5 percent market adjustment and 2.5 percent wage increase — the hospital system also offered other benefits, including an expansion of their employee health insurance, a contribution of 2 percent of annual base pay to a retirement savings plan for each resident, and an extension of their existing disability insurance for clinical fellows to residents.

"Most housestaff have understood that this is a clear response to us unionizing and to us having more power," Himmelstein said.

On their website, MGB denied claims that recent raises were in response to the ongoing union push.

"We do not need anyone else to tell us that competitive and attractive wages and benefits are important to our Trainees — we already know that," the website reads.

According to the site, recent compensation increases are part of a broader "multi-year process to assess and adjust the compensation and benefits of our entire workforce based on the market."

MGB Housestaff United organizers said the recent compensation increases prove that a formal union would further improve benefits for housestaff.

"They've already been able to pressure MGB and make them uncomfortable enough that they're starting to see a response from the employer," Della Fera said.

The March 7 email signed by MGB department chairs stated that recent compensation increases and benefits "demonstrate that the needs of our trainees and our training programs are a top priority, and that our voices together have been heard."

"We ask for your support to allow us to continue to do this with you directly," the email concluded.

In its March 16 email, MGB also distributed information on what unionization means for housestaff, including telling them that between contract negotiations, "new or unique and individual needs could not be addressed directly between you and your Program or Fellowship director."

"What we've seen has been a really coordinated effort by MGB to stop us from forming a union," Himmelstein said.

Members of the MGB Housestaff United organizing committee said department chairs and program directors began holding meetings with residents and fellows during working hours in January to "try to convince us that forming a union would be bad for us," Himmelstein said.

"It's very coercive," she said.

"These are people who are not only our current bosses, but also, we are in training programs, and we rely on these people for letters of recommendation and for references for us to get our first attending jobs."

On its website, MGB said it is "committed to providing factual information for Trainees and others who have questions about the union organizing activity" and the collective bargaining process as a whole.

While MGB's site says it is not "anti-union," MGB Housestaff United organizers said their decision to launch publicly was a response to what they felt was "anti-union activity."

"Now because we've been facing a very, very public and open boss fight, we had to come out and be public so we could respond," Murillo said.

Should the MGB Housestaff United reach the 30 percent threshold needed to request voluntary recognition, MGB is expected to deny it; the hospital system's site states that it "would insist on an NLRB election so every voice can be heard."

Organizing committee members said they expect to conclude their card campaign in the coming weeks and file for an election by the end of the academic year.

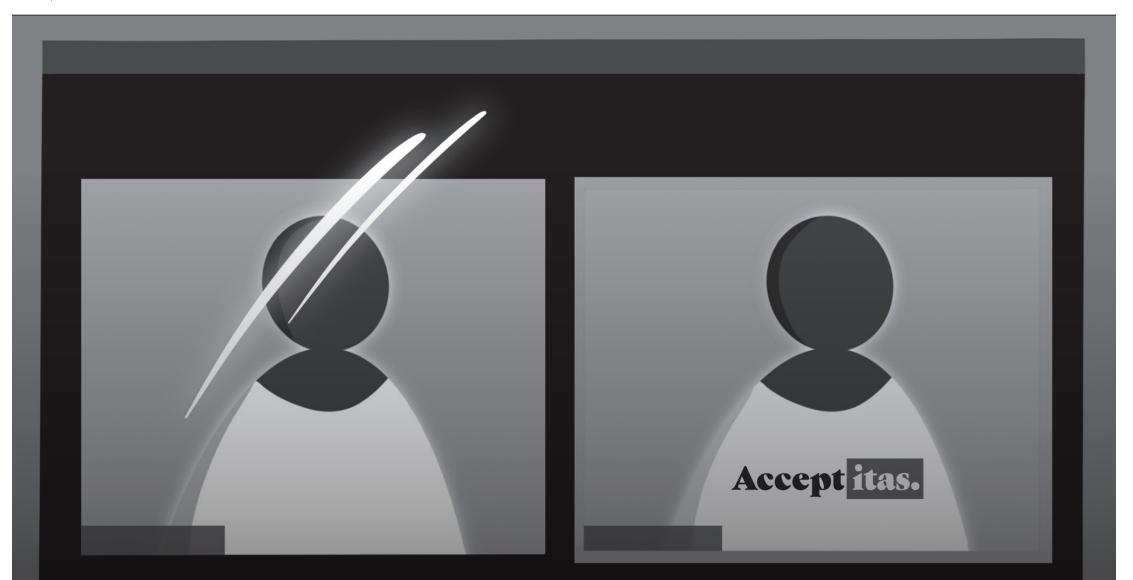

"We are at this incredibly powerful and wealthy institution, and we need to help have a say in how the power and resources here are directed to improve the lives of workers and the lives of patients," Himmelstein said.

lients and former admissions mentors are ' still seeking refunds, compensation, and answers more than six months after the acquisition of college consulting startup Acceptitas, which cut ties with its mentors in late 2022, leaving many unpaid and unaware of their termination for months.

Emmet A. Halm – a selfdescribed Harvard dropout and cryptocurrency entrepreneur — founded Acceptitas in August 2020, only to leave the company's mentors and mentees in the dark two years later after its acquisition by another college consulting group, Crimson Education.

announced the Halm acquisition to employees in an Oct. 24 Slack message - two months after the move had already taken place.

will be new "There opportunities for Acceptitas team members to expand the scope of their work," Halm wrote. "Mentors & outreach associates will have the chance to continue similar work under Crimson."

former Acceptitas Five mentors who spoke with The Crimson, however, said they never heard anything further about future work. Some continued to meet with their mentees for months, unaware that they would not receive payment.

"We weren't getting paid anymore," former Acceptitas mentor Elias E.Q. DeLeon'23 said. "And it was just very odd to see everyone just be so radio silent, especially after such a seemingly triumphant moment, like getting acquired as a company.'

"He didn't say anything would change, really – everyone just kind of kept going on as usual," said former mentor Jara A. Wilensky '24, who continued to work with her mentee for three months. "They just stopped paying us.'

In a March 7 statement to The Crimson, Halm said Acceptitas connected those who requested it to Crimson Education for

contact. Everyone else continued wrapping up hours with clients," Halm wrote.

Halm wrote in the statement that "no one was fired; the company was acquired."

"Mentors finished up the remaining hours with their clients and Acceptitas didn't take in any new clients," he wrote.

On Feb. 22, Halm posted in the Acceptitas Slack for the first time since October.

"We've sent several mentor payments over the last two months that previously fell through the cracks," Halm wrote. 'If anyone still has outstanding hours, please let me know asap."

Former Acceptitas mentor and Stanford undergraduate Enrique Flores said the Slack contained message "no acknowledgement" of the hours mentors spent trying to reach Halm following the acquisition, nor of the harm from Halm's "absence of communication."

"They did not fall through the cracks," Flores said. "You ignored them.'

'(don't tell mentors or clients yet)'

In August 2022, Acceptitas was acquired by Crimson Education. Co-founded by Jamie J. Beaton'16, Fangzhou Jiang, and Sharndré Kushor, Crimson Education is a global college consulting company, operating on a similar premise to Halm's start-up.

On its website, Crimson Education advertises "former Admissions Officers, Ivy League and other top school graduates" among its college consultants.

By late September, Halm had started listing himself as the "former founder of Acceptitas" on his personal LinkedIn profile, though mentors had not yet been informed of the acquisition.

Halm wrote in a March 7 email to The Crimson that he could not discuss the terms of the acquisition by Crimson Education due to a nondisclosure agreement.

Desiree A. Rickett '24, Acceptitas' chief operating officer at the time, contacted Halm on Sept. 20 about refunds to mentees that had bounced and asked why the company's Calendly subscription had lapsed.

"We're having problems sending out money on the he requested mentors "keep this

On Sept. 21, Halm responded, revealing the acquisition to Rickett.

"Hey Desiree, you can pause actions on PayPal. Acceptitas is being acquired by Crimson Education. This is not public information yet, so please keep on the DL (don't tell mentors or clients yet)," he wrote in a text.

"This means we'll be ceasing operations & transitioning folks to new exciting (& higher paid!) opportunities at Crimson," Halm wrote.

Rickett reached out to Halm again on Sept. 21 about what to communicatetoclientsexpecting refunds. Halm responded on Sept. 22, writing, "Nothing atm – more announcements to come soon."

"Just don't respond yet — I can reach out soon," he added.

Halm asked Rickett to

Acceptitas is being acquired by **Crimson Education.** This is not public information yet, so please keep on the DL.

compile a list of payments owed to mentors and refunds owed to clients. Rickett shared it with Halm on Sept. 28.

In the following month, Rickett asked Halm at least five times about refunds he missed from the list.

She followed up with Halm on Oct. 22 about what to do with a client who paid the company \$2,400 "a few weeks ago and has not heard back."

"Moving funds around rn to refund him," Halm wrote at 3:14 p.m. that afternoon.

"You can stop replying to Acceptitas related emails (company doesn't technically exist anymore)," he added.

'A Quiet Firing'

When Halm announced the acquisition of Acceptitas by Crimson Education in October,

leaving Acceptitas clients in the dark.

"If you have specific questions or want to indicate strong interest in taking on new roles & responsibilities, please message me," Halm added.

Mentors at Acceptitas worked independent contractors, as rather than employees of the company. The Crimson obtained three copies of mentors' contracts, which included a twoyear noncompete clause and a termination clause.

"This agreement may be terminated by either party upon 15 days of written notice to the other party," the contract states.

Halm's Oct. 24 announcement did not include any reference to the termination of mentors' contracts or the discontinuation of their work with clients.

"It seemed like we were being

at Brown University, reached out to Rickett on the Slack channel asking how to formally submit their resignation because they no longer had the time to mentor.

"Hi! Emmet didn't make this super clear, but the company no longer exists because you are technically 'resigned," Rickett wrote in response.

When Xiao asked if mentees had been informed of the company's acquisition, Rickett wrote, "I don't think so."

DeLeon said he considered no longer being employed Acceptitas a "theoretical by possibility" when he read Halm's Slack message. Still, he discarded the thought.

"I've heard, like, quiet quitting," DeLeon said. "But this is like a quiet firing."

'Dropped Off the Face of the Earth'

In the months following Acceptitas' acquisition, five mentors reported repeatedly failing to get in contact with Halm over missed payments.

Wilensky said she "didn't think much" of the October acquisition announcement, and continued mentoring for five more sessions, which would total \$150 in pay.

In a Jan. 7 meeting with one of her mentees, Wilensky said her mentee asked if the rumors were true - that Acceptitas was no longer paying its mentors.

'What are you talking about?" Wilensky asked her mentee at the time.

After trying to contact Halm through the company email, Wilensky received Halm's personal email from the client's parents, who were considering legal action.

It would ultimately take a month of Slack messages and emails to Halm for Wilensky to receive her payment on Feb. 2.

By the end of October, Flores had completed eight sessions with mentees, amounting to \$240 in pay, and had not received any compensation for them.

After three weeks without payment, Flores informed his mentees that he would no longer be able to work with them. The payment issues coincided with a critical period in the college early application process, with many application deadlines set for Nov.

BY THE NUMBERS

After messaging Rickett on Dec. 2 and Dec. 7 with no response, Flores messaged her on Slack on Dec. 11.

"Hi Desiree, I feel I have been rather patient and have yet to hear anything," Flores wrote. "I have detailed what has been happening with Acceptitas with my parents, and they are considering taking legal action."

"I genuinely don't understand why paying your workers has been such a struggle for you all, but it is unacceptable," he added.

On Dec. 26, three weeks after Flores had first privately messaged Rickett, she responded saying that she hadn't "gotten an mentor, totaling \$1,700, to help

'Ghosted'

Halm posted an application Acceptitas' for "Moonshot Internship" on his personal LinkedIn profile on Jan. 3, 2022. "If vou know entrepreneurial-minded high school or college students, applications are open," Halm wrote in the post. "Intern(s) will receive mentoring & a unique chance to lead their own start-up initiative."

Julie T. Phan first learned of Acceptitas' internship program through one of the company's Instagram posts. Phan, who attends a Title I public high school, said she found Acceptitas and its mission "really inspiring."

Phan completed Acceptitas' social media internship application through a Google Form. On March 23, 2022, she received an interview request from Mishra, identifying her as an "exemplary applicant."

But Phan did not hear back after replying to the request for an interview. She followed up on April 5, 2022, but she still did not

receive а response.

And then, on May 12, 2022, Phan received unexpected news.

'Welcome to Acceptitas!" Mishra wrote in an email to Phan and 21 other students. Though Phan joined send Benedict an IRS 1099 form the company Slack, and Mishra's email promised a Zoom call with the full intern cohort. Phan said she and the other interns received no further communication or direction.

answer from Emmet in a while. Ricket offered to send Halm's phone number, writing, "I don't know what to tell you."

"I haven't had access to the bank account for months and he isn't answering calls/emails/ texts," she added.

Flores reached out to Halm again on Feb. 13 – this time through Halm's personal email.

"I have been trying to get a hold of you about payment for my time at Acceptitas and was informed that this is a better email to contact you with," he wrote.

"I would like to be paid as soon as possible, considering it has been over 4 months," he wrote.

On Feb. 14, more than two months after Flores' initial outreach, Halm responded via email.

"Sent — hope your semester is going well," he wrote.

Seven minutes after Halm published his Feb. 22 Slack message encouraging mentors to reach out about outstanding compensation, DeLeon emailed Halm regarding payment. He never received a response.

DeLeon's last payment from the Acceptitas PayPal account is dated Oct. 11, 2022. He said he is still awaiting payment for 2.5 hours of work.

"I wouldn't call it late payments. I'm technically still owed \$70 in payment," DeLeon said. "So it's not necessarily late, it just also dropped off the face of the earth."

Former Texas Assistant Attorney General Kerry V. O'Brien, who specializes in labor and employment law, said mentors "could expect and demand" to be paid on the same regular payment schedule of the contractual relationship, "regardless of the absence of anything specific in the contract." DeLeon said Acceptitas seemed like a "typical Harvard startup.'

"And even when it may not have the legs, it's a bunch of people our age trying to act, to actually be CEO, COOs, that kind of stuff." DeLeon said. "It's a lot of pressure, and a lot of things can fall through the cracks in terms of professionalism and workflows."

contract.

It's a bunch of people our age trying to act, to actually be CEO, COOs, that kind of stuff.

Elias E.Q DeLeon '23 Former Acceptitas Mentor

a passion project. After two sessions, Mathur emailed Rickett to request a mentor change in September, citing dissatisfaction with the emphasis on college admissions.

After a month without a new mentor, he emailed Rickett on Oct. 31.

"I am not feeling comfortable with the current state of events in your organization," Mathur wrote. "Is it possible to get refund?'

"No worries! I will forward you along to Emmet who can get that processed for you," Rickett responded on Oct. 31.

Mathur followed up with Rickett and Halm on Nov. 8 and again on Jan. 10, 2023, to ask about the refund. Mathur said he has still not received a refund.

Halm wrote in the March 7 statement that "all client requests were either handled by management or forwarded to me as appropriate."

"I think they are using the Harvard name as a clickbait," Mathur said.

"See, I believe they are kids," Mathur added. "But if they're trying to pull a fast one on people, that's not good."

'Founded 100% by Harvard Students'

When Harvard's campus shuttered due to the Covid-19 pandemic, Halm took a gap year and built Acceptitas, which marketed itself as"founded 100% by Harvard students."

Undergraduate mentors would meet virtually with high school students around the world, helping them develop "passion projects," providing feedback on application essays, and guiding them through the

for independent contractors and a nondisclosure agreement, she added.

"I can't see a reasonable scenario in which somebody who is the COO in title, form, and function is properly an independent contractor," O'Brien, the employment attorney, said.

Halm did not respond to request for comment on the Acceptitas' COO being an independent contractor.

Halm denied that he did not provide executive-level managers with contracts in a March 7 email to The Crimson.

"This is objectively false," Halm wrote. "All our exec-level positions have clearly defined & signed formal contracts."

Halm attached as evidence a screenshot of a Google Doc, last edited April 26, 2022, listing "COO responsibilities," including "immediate tasks," "future tasks," and a to-do list. The screenshot also showed base pay for the position as \$600 per month, with a bonus of 5 percent of gross revenue - though no other employment terms are referenced.

The screenshot Halm provided did not show a signature by Halm or any Acceptitas executive on the document.

"I definitely wasn't paid \$600/ month," Rickett wrote when asked about the terms included in the document. She wrote that her compensation rate remained \$30 per hour even after transitioning to COO.

Halm did not respond to subsequent requests for comment on the COO contract or compensation, and he did not respond to a request to provide a signed copy of the document.

"I poured my whole soul into the application - whatever I do, when it involves students and community - I value that the most," Phan said. "And so, when I didn't hear anything back, I felt really confused and disappointed."

Mishra, who was interviewing tasked with prospective interns. confirmed that no interns actually were brought on.

"That's on my end completely. I mean, I'll take accountability," Mishra said when asked why he did not follow up with Halm on the future of the internship program.

On Feb. 12, 2023, Phan sent a message in the Acceptitas Slack channel inquiring about the state of the internship program, writing, "I took my time to apply, got in, and didn't receive any future updates."

The response was not what Phan had hoped.

"Since Acceptitas basically doesn't exist

anymore/ no one is employed anymore, I'm going to guess the internship doesn't exist anymore," Xiao, the former mentor, said.

"Sorry you got ghosted too - super unprofessional," they added.

BY ASHER J. MONTGOMERY CRIMSON STAFF WRITER

hen Mateo Gomez invited his older sister, Andrea Gomez, to visit him at his home in New York City for her 33rd birthday, he had a plan.

The pair saw a drag show and watched "Dear Evan Hansen" on Broadway, walking for hours between each stop on the trip. As they walked, Mateo Gomez told his sister — a Miami, Florida resident — that each destination was just around the corner.

"It was so much fun, every walk everywhere because he will say, 'Oh, it's just right here,' and I will walk and walk and walk for hours," Andrea Gomez said. "I was like, this is not funny. We don't walk in Miami like this."

For his sister's birthday last year, Mateo Gomez flew in from Boston to Fort Lauderdale, Florida, where he took a train straight from the airport to a club in downtown Miami to attend her party.

"All the way down from there to the club with his luggage to go party with me," Andrea Gomez said. "That was very sweet — very special."

Mateo Gomez, a Harvard Kennedy School student in the mid-career master in public administration program and a special agent for the FBI, was born in Medellín, Colombia, and immigrated to Miami when he was 10. Friends and family remember Gomez as a fierce advocate for LGBTQ+ rights who was passionate aboutgiving back to those

'Caring, Calm, and Selfless'

Though Gomez was open about his sexuality, he rarely discussed his work with the FBI. After his death, family and friends learned more about his stories working as a special agent from his colleagues.

Andrea Gomez recalled a recent Christmas when their lamily planned on reuniting in Miami. Mateo Gomez canceled three days before with little explanation, saying only that it was work-related. It wasn't until after her brother's death that Andrea Gomez learned about his role investigating Venezuelan criminals who lived in Cabo Verde. He was the only agent in his group who spoke English, Portuguese and Spanish, and the FBI needed him to translate for the operation. "They were surprising in a way because we didn't know the level of how important his position was, since he never really spoke much about what he did in his job," Gomez said. "But at the same time, the way he was as a person and professional — it all made sense. All his coworkers loved him very much because he was very caring, calm, and selfless."

Gomez died by suicide at his

residence in Boston on Dec. 17, 2022. He was 32.

When Mateo Gomez was admitted to Cornell University for his undergraduate degree, Andrea Gomez said it was an important moment for their family. The family learned to speak English through the many jobs they worked in the service industry, she said, and none spoke English before moving to the United States.

"It was the first one of us leaving home to go to a university, and my mom was very excited and very supportive," Andrea said. "We all were, and were very proud of him. And we always supported him in whatever he wanted to do."

'Deeply Committed to Public Service'

In summer 2012, after his graduation from Cornell, Mateo Gomez began working at Teach for America, a national nonprofit that trains recent college graduates to serve as teachers for underserved classrooms.

He moved to Los Angeles for training, where he met Phil Y Kim, another Teach for America member.

"I think anyone who met Mateo immediately felt a sense of community with him," Kim said. "He had this ability to relate to people in a way that was just really affirming and welcoming."

Together, they threw parties and "were meeting everybody they could," Kim said. They bonded over a similar desire to give back to the education system that they felt they had benefited from.

"He and I were both similar in that we wanted to do something meaningful that had a high impact," Kim said. "We both cared deeply about our education system and wanted to make a contribution towards the system that really took care of us and benefited and supported us along the way."

When Gomez began teaching at a middle school in San Jose, California, he developed strong ties with his students, according to Kim. After his death, videos surfaced of Gomez dancing with his students.

"His ability to connect with young people was just so evident Mateo Gomez, a Harvard Kennedy School student and a special agent for the FBI, is remembered by friends and family as a caring and selfless person who gave back to those around him. COURTESY OF ANDREA GOMEZ

Mateo Gomez was a HKS student in the yearlong mid-career master in public administration program. COURTESY OF ANDREA GOMEZ

in his teaching days, and I know that subsequently, since he left the classroom, he would always fondly recall his relationship with his kids and families that he really enjoyed," Kim said.

Kim said he believes this same desire to give back led Gomez to join the FBI, starting with working a part-time job in linguistics, then transitioning to full-time work combating cyber crime.

"He has always been someone deeply committed to public service and just really believed in trying to improve things for everyone by working from within," Kim said.

Gomez's partner of six months, Luis C. Herrera Favela, said Gomez had a strong drive to improve the world around him. After the 2016 Pulse Nightclub

Shooting in Orlando, Florida, Gomez immediately volunteered to aid the FBI investigation, Herrera Favela said he learned from a colleague following Gomez's death. Gomez, who shared a Latino and gay identity with many of the victims, helped to comfort those affected by the tragedy, Herrera Favela said the colleague told him.

"In this school, everyone is bragging about things. He never said anything. And he actually was in the frontline of really important things," Herrera Favela said.

"He always had this amazing sensibility to step back," Herrera

Mateo Gomez helped revive the FBI's participation in New York's Pride March. COURTESY OF ANDREA GOMEZ

Favela added. "Usually here leadership is understood as the opposite, that stands front. But for him, when he had the opportunity, leadership was exactly the opposite, he would step back and allow other people to say things."

Harvard Kennedy School Dean Douglas W. Elmendorf and Senior Associate Dean for Degree Programs and Student Affairs Debra E. Isaacson shared condolences after Gomez's death in a statement on Dec. 18, 2022.

"When Mateo arrived here for the MC/MPA Summer Program, he described his interests in wonderfully broad and meaningful terms, citing travel, languages, and international affairs alongside coffee, democracy, social justice, and 'inclusion and equality in the new world,'" they wrote. "Mateo's passing is a heartbreaking loss for his family and

friends, for everyone at the Kennedy School, and for the many people he had already served in his life or would have served after graduation," they added.

'Very Open, No Shame'

Mateo Gomez was always open about his identity as a gay man, Andrea Gomez said.

"Very open, no shame," she said. "My parents have always been very supportive. My dad has gay flags everywhere."

During his time in the FBI and beyond, Gomez looked to create

Still, Gomez's privacy around his work did not take away from his ability to connect with those around him.

"He had this really calm demeanor about him that I think a lot of people really, really loved about their relationship with him," Kim said. "You could sit down and talk to him for hours and hours about pretty much anything."

Herrera Favela said it was "so easy" to be with Gomez, who was "not judgmental at all."

"Maybe it was a piece of how he talked. He was always interested in you," Herrera Favela said. "He always memorized small details of your life."

We Can Have Our Code and Eat Camus, Too

HUMANITIES VS. STEM. When it comes to sweeping pronouncements about the extinction of English, we remain skeptical. This crisis narrative seems exaggerated and anecdotal at best.

BY THE CRIMSON EDITORIAL BOARD

re we the last generation of English majors? A recent New Yorker article warns we might be. The piece worries that humanities enrollment — which has declined by 17 percent over the past decade — is in "free fall" due to a mixture of professional pressures, changing university investment patterns, and economic incentives facing students.

It's only the latest contribution to the now-ubiquitous humanities versus STEM dichotomy — including two nearly decade-old opinions from this Editorial Board, titled "Let Them Eat Code" and "Let Them Eat Camus," in which we found the latter ascendant and the former moribund.

However, when it comes to sweeping pronouncements about the extinction of English, we remain skeptical. This crisis narrative seems exaggerated and anecdotal at best, stemming from a lack of detailed statistics regarding the so-called decline of humanities.

To start, the very definition of what constitutes a humanities field is in flux. Different definitions of a humanity include or omit fields like History inconsistently, and adjacent or interdisciplinary fields think of Harvard's own Social Studies or History of Science concentrations — often expose students to humanities scholarship, even if they're not officially counted as such.

We do know that the absolute number of humanities degree holders has, on net, increased over the

past five decades. Furthermore, students of other disciplines can and do benefit from humanities education at most modern universities, thanks to core and distributional requirements.

Before making broad claims about the vitality or, more specifically, the lack thereof — of the humanities, we find it crucial to look at data such as per-year enrollment statistics for humanities classes in order to paint a more granular image of the state of Camus on campuses today.

Of course, the humanities are incredibly worthwhile; none of our skepticism about the statistics attached to the narrative of their extinction, as over-sensationalized as we may consider it to be, should be taken to suggest otherwise. There is both innate and instrumental value to literature, philosophy, and art—subjects that have illuminated human civilization for millennia and will almost undoubtedly continue to do so even amidst dramatic projections of their decline.

However, many who decry the "death of the humanities" falsely see the humanities as claiming exclusive rights to complex conversations about what it means to be human — conversations that, the logic follows, will disappear along with the humanities as we know them. This displays a fundamental misunderstanding about the purpose of STEM scholarship. Biology and chemistry investigate the complex mechanisms allowing for human life. Mathematics and physics model every aspect of our quotidian existence using reason and logic. And increasingly, computer science is dealing directly with questions about what it means to be human as it tries to create humanity without the human — through artificial intelligence.

The discourse around the decline of the humanities also tends to focus on the most traditional and Western-centric fields, particularly English, ignoring the emergence of novel fields like ethnic studies. Generalizing the decline of English degrees into the decline of the humanities as a whole reduces the humanities to only one point of view, ignoring newfound diversity in the ways we tell stories about the human experience.

We would also be remiss not to address one of the primary sticking points in the alleged conflict between code and Camus: doubt regarding the employability of humanities majors. There is a perceived relationship between students' majors and their career prospects. Some students, especially those from low-income backgrounds, may feel pressured to choose their major with this perception in mind.

But in general, we do not definitively know why students choose the majors they do. Each student weighs various questions when making this personal decision — and employability, although a realistic concern for most, is often just one among multiple factors. Attributing perceived declines in humanities degrees solely to perceptions of employment reflects a general bias against the humanities as unemployable fields of study.

Given the magnitude of careers out there, every discipline can be studied on multiple pre-professional paths with varying levels of desirability and starting salary. Humanities degrees like history, English, and philosophy are incredibly popular among future high-profile lawyers. Meanwhile, many STEM students, especially those in more theoretical fields like pure mathematics, could spend much of their careers in the more opaque world of academia.

We reject many of these artificial divides between disciplines altogether. All too often, we perceive a sensationalized conflict between STEM and the humanities, pitting each side against each other in an unproductive Manichean narrative. In reality, our world is nothing if not interdisciplinary, especially when addressing important questions about what it means to be human. And the benefits of a broad, well-rounded education are manifold: As political theorists have long recognized, a well-functioning society is oiled by informed, engaged public discourse among citizens knowledgeable in a variety of fields.

Accordingly, it's essential for Harvard — and all schools — to fund disciplines, no matter their enrollment, in line with their needs. Dwindling numbers can reflect many things, especially shifting attitudes and demographics amongst students. They do not, however, determine how important a discipline is, and should not be treated as such.

In the meantime, we feel that it's time to rethink the General Education system. Courses are too easy and too shallow, allowing students to skate through Harvard by only ever taking challenging and engaging courses in their chosen discipline. This is not only contradictory to the promise of a liberal arts education but also detrimental to our collective understanding of the world. We urge Harvard to consider amending the GenEd system to instead focus on foundational, survey-style courses across prominent disciplines, allowing students to deeply and systematically engage with the diverse lines of inquiry in academia.

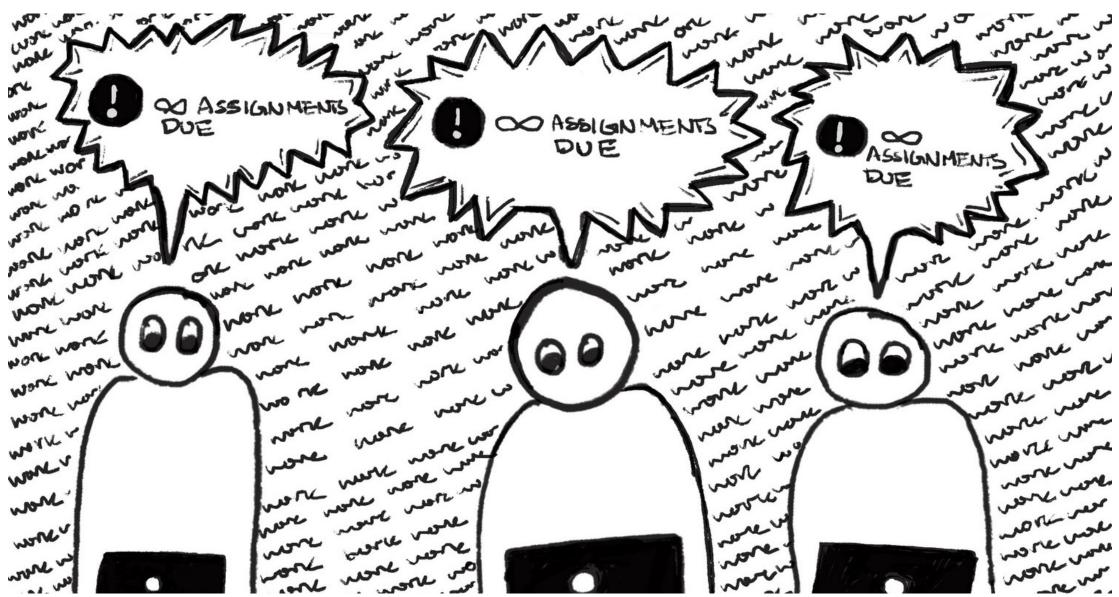

Are we the last generation of English majors? No. We're also not the last generation of computer scientists, biologists, or mathematicians. The future is interdisciplinary. The energy currently invested in unproductive squabbles between STEM and the humanities should be harnessed into collective dialogue and inquiry seeking to drive our current world forward.

In short, we not only can, but also should, have our code and eat Camus.

Whither the Magic of Course Registration Period?

BY SAM E. MEACHAM

The course registration period never fails to fill us with a sense of wonder. If you are like me, at the end of each break, your Crimson Cart is filled to the brim with any class that you have any interest in at all, and your August and January days contain hours of perusing Harvard's manifold course offerings in search of hidden treasures.

Fresh from our time spent away from campus, our stores of curiosity replenished from the crushing weight of the last semester, we bask in the endless opportunities before us: to try out a new subject, to broaden our grasp of our field of concentration, or even to fill a credit that brings us closer to the promised land of graduation. All of it fills us with a sense of possibility that pushes us to read dozens of syllabi for classes we will likely never take, to spend hours game-planning our weekly schedules, and to show up to the first one or two lectures of the semester well-rested, with a new notebook and fresh pens, ready to learn.

Now, as we return from spring break and begin the concluding half of the semester, does anybody still feel

this sense of wonder?

We're two months out of the course registration period, and I would wager that most of our current sentiments toward academic pursuits share very little in common with this beginning-of-semester sense of wonder. We aren't nearly as excited about school as we used to be.

It doesn't take long for the excited curiosity of the beginning of the term to wear itself out. For some, it might be the first 20-hour problem set that does it. For those more inclined towards the humanities, like myself, it could be the first 3 a.m. night cramming a Frankfurt School reading for Social Studies 10B tutorial — and the week with three essays due that follows it. No matter which way you cut it, our classes lose much of their luster by the time we reach spring break, and the week-long recess does little to restore it. Father Time is not kind to the bright-eyed and bushy-tailed students who walked into the first lecture with a spring in their step.

No matter how hard we try to stay excited about our intellectual experiences, it seems that a kind of motivational decay is inevitable. "Burnout" tends to make us cynical and uninterested in the activities we have chosen to fill our days. Part of this unhappy descent seems inescapable: As more assignments and responsibilities pile up, our aspirations lower from the realm of pure intellectual curiosity to that of ensuring our academic self-preservation. Part of it is also a lack of novelty: As we spend more and more time within a class, no matter how engaging, the attraction it had during registration period must wear off.

But I am not content to let that be the end of it. After all, wouldn't we all be more fulfilled with our academic lives if we could sustain the sense of amazement we possessed at the very beginning of the semester? This requires treating our academic pursuits as not only means to a professional end but, at least in part, as ends in themselves. It means holding onto the raw curiosity that fuels our love of learning and prompts us to study what we do.

I don't profess to know the solution. Perhaps professors and teaching fellows designing courses should be more attentive that volume of work often trades off with the desire to do that work. Perhaps the academic calendar could incorporate more frequent breaks or wellness days. But, in the end, the task of staying curious falls to us as students. We all find ourselves faced at times with the specter of hundreds of pages of reading, plus an essay, plus a pset. We should lose the all-ornothing mindset, common at least to our high school selves, that encourages GPA and resume maximization at the expense of enjoyment. (God knows I am guilty of that mindset). Instead, we should recognize that we get only 32 Harvard classes over four short years and try to take advantage of those classes to the very fullest.

We are here not simply because we are capable but because we are curious and eager to learn. As easy as it is to forget our natural curiosity, we would all do well to remember how excited we were at the very beginning of the semester — and try to the best of our ability to find that feeling again. We should take the hiatus of spring break as an opportunity to renew our academic energy.

Maybe we can find the magic again.

THE HARVARD CRIMSON MARCH 24, 2023

OP-ED

Why I Won't Celebrate Harvard for Teaching Tagalog

BY ELEANOR V. WIKSTROM

ost people's idea of a perfect lecture probably doesn't involve holding back tears for a full hour — but when the thing you've been waiting for over the course of your college career finally comes to fruition minutes after you take your seat, sometimes it can't be helped.

On February 1, an email from the director of the Asia Center elicited my own class-time encounter with this peculiar, salty joy. The news in my inbox? In the coming months, Harvard will hire a preceptor to teach Tagalog — the most-spoken language in the Philippines, the native tongue of my mother's family, and the language, as I uncovered for The Crimson in December 2021, that Harvard affiliates leading the United States colonial education system in the Philippines once worked to suppress.

Harvard has existed for nearly four centuries all of those years as a settler institution on unceded Native land, over a third of them as an active site of enslavement, and approximately a quarter of them as an observer of the legacy of the overseas colonial education system that it helped to establish.

Through administrators that bore its degrees, its pedagogical training, and its presidential seal of approval, Harvard designed and implemented a system of mandatory English-only instruction in the Philippines — ignoring contemporaries' concerns that it would lead to cultural destruction and building the foundations for a pernicious, enduring form of internalized racism known as colonial mentality.

Yet for over 120 years following the U.S. invasion of the Philippines, which occurred concurrently with the installation of a Harvard graduate as the colonial superintendent of education, Harvard found no reason to offer the language of a country whose colonization helped launch the U.S. into its modern-day position as a global superpower.

Never mind that through the 1990s, Filipinos were the second largest immigrant group in the U.S. Never mind that today, Tagalog remains the fourth most-spoken primary language in the nation, following only English, Spanish, and Chinese. And never mind that students in the Harvard Philippine Forum spent years advocating for Tagalog courses, sending countless unanswered emails to the administration in what appeared to be the one exception to Harvard's notable commitment to funding "obscure languages.'

The only possible reason for this lack of a reason is systematic ignorance: an inexcusable unawareness of the significance of Tagalog in the daily operations of this country, or a decontextualized false

also speak fluent English. This belief that an entire language - and all of its embedded memories, legends, worldviews, and possibilities — is of little to no value compared with English and thus permissible to mute has colonial precedent; its hypothesized role here is nothing new. For over 120 years, Harvard has perpetuated the same brand of ideological ignorance in the academic setting both at home and abroad, its manufactured silence spanning the Pacific, its halls reverberating outwards with deafening white noise.

In the weeks since I first received that fateful email, my processing of the news has taken place in parallel with preparation for Cultural Rhythms, Harvard's oldest and largest multicultural production. Tomorrow, members of Harvard Philippine Forum will perform tinikling, a folk dance in which two dancers deploy strategic footwork between clapping bamboo poles.

Some say tinikling was inspired by the grace of the hopping tikling bird; others, the defiance of farm workers who learned to dodge bamboo-stick strikes to their ankles during the period of Spanish colonialism. Either way, it is one of the most popular dances in the Philippines and in the Filipino American community — a form of cultural articulation whose boisterous, joyous noise-making infectiously invites more.

My mother lost the angles of her mother tongue by the time she finished high school in Los Angeles; like many second-generation Filipino Americans a group that in 2004 lacked heritage language fluencyatarate nearly 40 percent higher than the average across Asian immigrant groups - my inheritance was a mouth rounded by soft English words, assimilated, accentless

But my mother taught me tinikling when I was seven, her old college costume of woven piña cloth loose over my girlish frame. I learned to dance where my tongue was severed, borrowing another form of language to graft on the space of the wound.

The diaspora is like this: a series of survivors' translations, a making of music from shipwrecked tongues. Unable to speak Tagalog, I cannot name what was lost. But I have found other ways to speak - just as my mother did, and just as Filipino American scholars and students and advocates have for decades.

Amid institutions filled with white noise, we articulate translation after translation to keep our heritage alive, audible if you know how to listen.

Harvard's existence can be understood as both an overarching legacy and as a series of individual moments, including the present, within that legacy. This is how people can be harmed by what Harvard was, even if it is no longer - even if it repatriates the stolen artifacts, redresses the sinister ties, offers the severed language.

For groups experiencing the material and ideological effects of Harvard's role in U.S. empire, when do present instantiations of the University outweigh its legacy?

I do not mean to suggest that we seek a return to a mythical pre-colonial essence; such an aim is not only impossible, but also misrepresentative of the ever-shifting nature of culture and identity. From a material standpoint, however, Harvard's legacy is still largely a form of manufactured ignorance. Currently, only one course on the Philippines is offered at the College; Southeast Asia, made illegible between South and East Asian studies, entirely lacks a formal department; and the effects of Harvard's pedagogy still linger noxiously in the transpacific setting, producing psychological scars that cannot easily be unmade.

The hiring of a Tagalog preceptor is a necessary first step; it is also just one instantiation in a legacy made of instantiations, one novel articulation in a century-long speech. So while I am undeniably elated by the news of Tagalog's offering, I refuse to celebrate Harvard for a legacy it has yet to remake.

Instead, I celebrate those who made this current moment possible - those who have been gradually drowning out Harvard's systematic white noise by speaking alternate tongues of resistance all along. I celebrate the students who argued with an apathetic administration for years, making the presence of the community audible through rhythm and dance even when Harvard refused to listen. I celebrate the alumni in the Philippines who raised support for the new position, amplifying the call for Tagalog until it was heard by the right people. I celebrate director James Robson and the staff at the Asia Center who worked to create an institutional space for Southeast Asia, translating a decades-long dream into decisive action.

And most of all, I celebrate the preceptor and students who, in the coming months and years, will give new voice to once-muted words. Articulated through angular tongues and joyous noise, their proud, boisterous Harvard is the one that I hope, someday, to celebrate.

like to dance. But I have been met with amused bafflement at my two dance-related decisions on campus, from friends and strangers alike: one. my recent choice to join Candela, Harvard's Latin social dance group, and two, the fact that I have not once been in the Asian-American Dance Troupe since I "seem like I'd be in AADT."

Of course, these comments were made with-

out malice. But the surprise that my (Asian-American) Candela dance partner and I would love to salsa, and my odd sense of shame at not being in AADT (like it's some rite of passage for any Harvard east-Asian girlie who ever had a K-pop phase) made me cognizant of the

unspoken cultural borders divvying up campus organizations.

similar to us.

That is, we could and should do better with intercultural dialogue - while protecting how Harvard student organizations cultivate their own flourishing spaces.

Why the emphasis on diversity? Well, it leaves a weird taste in my mouth to have to "prove" this claim, but having a wide variety of friends makes you a better human. Research has revealed that a lack of meaningful interaction with those of other racial groups leads us to be less open-minded, resort to stereotypes, and to assume everyone's reality is similar to ours. In fact, one synthesis of 515 studies found that the more contact people had with those outside their racial group, the less prejudiced they were.

Unfortunately for us, one study based on 2007 national survey data found that friendships formed in college are among the least likely to be racially diverse compared to those formed in other environments. So even though Harvard admits a diverse pool of undergraduates, we (including myself, I admit) may be forming increasingly homogeneous social circles. (Though, it's worth pointing out that people of color do a better job: According to a 2022

study from the Public Religion Research Institute, Hispanic, AAPI, and Black Americans are much less likely than white Americans to have racially homogeneous friendship networks).

Still, as mentioned, we should still protect enclaves at Harvard that allow students to embrace their identities and create community. This is especially true for smaller and/or historically marginal-

ized groups where it may be harder to find others that empathize with, and don't speak over, your nuanced experiences. Case in point: In 2019, students at a Harvard forum called "The Role of Asian Cultural Organizations on Campus" called out the overrepre-

sentation of East Asians in "purportedly pan-Asian spaces" — implying that we shouldn't broadly prioritize intercultural groups over smaller, but more empowering and safer spaces of belonging.

You may argue that bridging cultural groups isn't a huge problem, since we can meet friends unlike us in many ways, like classes or non-culturally-affiliated clubs.

However, even amongst diverse classmates, we often experience homophily, the tendency to gravitate towards those similar to us. Furthermore, our classes might not be representative due to histories of racial exclusion in certain fields. For example, in Harvard's admitted Class of 2026, 15.2 percent of Harvard's admitted class of 2026 identify as African-American and 12.6 percent identify as Hispanic or Latinx. By contrast, a 2022 survey revealed that each of these groups make up only 9 percent of undergraduates at Harvard's School of Engineering and Applied Sciences. So, given this self-segregation tendency and these patterns of historical underrepresentation, maybe your problem set buddies are more homogeneous than you realize.

Likewise, non-cultural organizations can still be dominated by certain identities, which may result in a feeling of implicit exclusion. No wonder our students have nurtured countercultural spaces to explore areas they've historically been unwelcome in from Lavender Room Magazine, which is centered on diversity in fashion; to LiFT, which represents Harvard Latinx in Finance and Technology; to HSBSE, the Harvard Society of Black Students and Engineers.

Sowhatdowedo?Weshouldbemoreopen-minded, but we shouldn't collect "diverse friends" like Pokemon, nor intrude on safe spaces that communities create for themselves.

Honestly, dance — and any cultural form of expression — is a great middle-ground to start dialogue. Harvard's Ghungroo, a dance and music showcase centering South Asian culture and the diaspora, does this well: Not only is it a stalwart of South Asian belonging at Harvard, it also actively welcomes - and successfully includes - eager non-South-Asian students regardless of dance experience.

Still, when making these spaces open to genuine allyship and curiosity, how do we not have marginalized groups sacrifice emotional labor and their sense of safety to cater to outsiders that might harbor superiority complexes for being culturally woke? (I think of

those self-satisfied white dude influencers that surprise Chinatown locals with fluent Manda-

rin.) A potential answer is collaboration. Some clubs are doing it already from Harvard Creative Writing Collective's poetry reading

Research, to a discussion of bodily femininity re- and Hypocrisies," runs on alternate Mondays.

cently co-hosted by the Asian American Women's Association and South Asian Women's Collective. However, such collaborations take a lot of intentionality and resources to plan - so the Harvard Undergraduate Association or the Harvard Culture Lab Innovation Fund, which supports initiatives fostering diversity and belonging, should more explicitly fund and encourage intersectional events.

As a first-year, I helped start The Wave Asian Arts Magazine, intended to pioneer pan-Asian creativity on campus.

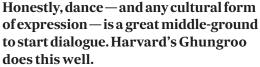

But when it veered towards East Asian creators, and when that same year, Ghungroo created its own South Asian arts magazine, I felt like I failed. And I still feel that it's important to strive for equitable representation, and to find collective empowerment through what we find in common.

But maybe I should've viewed that "failure" as a chance to converse with other groups. Communities have the right to forge their own spaces, so perhaps, proactive solidarity is just as important as inclusion: to have all our voices heard, the way we want them to be.

Anyway, I'll be performing at Cultural Rhythms this Saturday with Candela (I'm nervous!). If you're there, I'd love to bond with you over our familiarities or unfamiliarities with the merengue, K-pop dance, or the famous guest they have yet to reveal (I'm hopingit's Lizzo).

And I hope that initial camaraderie we foster makes it easier to converse candidly when we meet again: about our hobbies, our histories, our hopes. After all. it's always wonderful to find another friend to experience the world with.

SAYED FAISAL

City Officials Meet with Local Activists

JUSTICE FOR FAISAL. Protesters rallied on the steps of City Hall during a meeting between organizers and city officials.

BY RYAN H. DOAN-NGUYEN AND YUSUF S. MIAN CRIMSON STAFF WRITERS

s roughly 100 protesters rallied on the steps of the Cambridge City Hall Annex Tuesday, city leaders met with local activists after months of demonstrations over the police killing of Sayed Faisal. Three representatives from the city of Cambridge – City Manager Yi-An Huang '05, Interim Director of the Community Safety Department Elizabeth M. Speakman, and Director of Communications and Community Relations Lee Gianetti - sat down with four organizers from the Boston Party for Socialism and Liberation and 13 local students to discuss their concerns.

Faisal, a Bangladeshi American student at the University of Massachusetts Boston, was fatally shot by Cambridge Police on Jan. 4. According to CPD, Faisal approached officers wielding a knife following a five-block chase. When a non-lethal sponge round failed to stop him, an officer shot and killed him.

In the months since, protesters have alleged police brutality and racism in Cambridge's police department and reiterated demands for the city to name, fire, and prosecute the officers involved, as well as release the full unredacted police report. Little progress was made on these points, according to Party for Socialism and Liberation organizer Joe Tache, who participated in the meeting and called the talks "frustrating."

"Unfortunately, the city wasn't willing to make any movement on the demands right now," Tache said.

activists have a "shared urgency" on police reform, but added that he was disappointed in the Party for Socialism and Liberation's approach to the meeting.

"I appreciate their passion and activism and the opportunity to have dialogue," Huang wrote. "I'm disappointed that Boston PSL is only interested in firing police officers without process and was uninterested in conversation about the how to achieve the change we all desire."

In an interview Tuesday morning, Huang said the city approached the meeting seeking a middle ground with the organizers.

"I have interest in a real conversation and a productive conversation," he said. "A lot of the direction that they're pushing in — for police reform, legitimacy, transparency, accountability — those are all things that we're really committed to."

"There's a broader conversation about police reform," Huang said. "Are the folks who are protesting interested in that or are they just interested in protesting?"

An hour before the meeting, protesters converged on the steps of City Hall to continue a rally that began the previous day. Speakers shared stories of personal encounters with police, led chants of "Justice for Faisal," and demanded change from CPD and the city of Cambridge.

"One thing that the city manager told us is that he's gotten advice to wait, and we'll go away," Tache told protesters, triggering a wave of boos.

At 5:22 p.m. the crowd of protesters marched to the City Hall Annex, where the meeting between organizers and city officials was taking place. Four CPD motorcycles accompanied them - to the jeers of protesters - and parked across the street at John M. Tobin Elementary School to observe the demonstration.

For nearly two hours, the demonstrators marched in a circle by the entrance of the City Hall Annex, waving signs, singing songs, and chanting "No justice! No peace! No racist police!" "Release the names," and "This racist system's got to fall."

ers are going on right now as we speak," said Meilyn C. Hug, an organizer with the Party for Socialism and Liberation and the demonstration's emcee. "Let's make some noise so the city manager can hear the energy in this crowd."

Despite the lack of action, pro-

the meeting with the city officials. "We should all be super proud of ourselves."

Huang said in the interview Tuesday that he is accountable to residents of Cambridge despite his role as an unelected city manager - a feature of Cambridge's Plan E form of government that activists have called undemocratic. "I am more accountable in these kinds of circumstances," he said. "If you look at my contract, ultimately, a majority of city councilors could terminate my contract at any time," he added.

demonstrations had already impacted the state of policing in Cambridge, pointing to a series of policing reforms made in the months following Faisal's death.

Cambridge Reiterate Support for **AP African American Studies**

BY SALLY E. EDWARDS AND AYUMI NAGATOMI CRIMSON STAFF WRITERS

Amid national controversy surrounding Advanced Placement African American Studies, Cambridge Public School Committee unanimously passed a motion reemphasizing the district's commitment to the course at a meeting Tuesday.

The College Board introduced the AP course this year, after a decade of development by teachers and professors around the country. Harvard professors Henry Louis Gates Jr. and Evelyn Brooks Higginbotham, who teach the Introduction to African American Studies course at Harvard, advised the development of the AP course

Gates praised the course in an interview with Inside Higher Ed, saying it "provides students with a firm foundation of facts and evidence about this extraordinarily rich saga of American history."

The AP course was introduced in the 2022-2023 school year, with Cambridge Rindge and Latin School being one of 60 chosen to pilot the program.

Grace K. Clemente – a CRLS student and representative on the Committee who introduced the motion reiterating CPS' support for the curriculum – was one of the first students to take the course last semester.

"I think it was probably one of the most, if not the most amazing courses, I've ever taken in my life," Clemente said.

The Florida Department of Education wrote a letter to the College Board on Jan. 12 stating that the AP African American Studies course "lacks education-

al value," a belief which Clemente said was "egregious."

After hearing about Florida Governor Ron DeSantis' plan to ban the course in Florida public schools, Clemente was motivated to bring the motion to the committee alongside fellow student representative, Adelina R. Escamilla-Salomon.

"There's so much value that goes into this course, and so much intentionality behind creating the course, that I think it was really, really a huge step forward," Clemente said.

During the meeting's public comment portion, some CRLS students also said they support the motion. Helen Hailemariam, who took the course last semester, said many students including herself were "brought to tears" during a classroom discussion following DeSantis' statements.

"Over the course of the semester, the class not only became a space for learning about history that was representative of my lived experiences, but also a space where I could express my fullest self," Hailemariam added.

David J. Weinstein, a member of the School Committee and parent to two CPS students, said the student's commitment to the course was "really clear" and that the course "stands out as a really welcoming place.'

"I think this really shows the power of an inclusive curriculum," Weinstein added. "You certainly can't understand American history if you don't understand Black history — you can't understand world history if you don't understand Black history."

School Committee member Ayesha M. Wilson said she stands "in solidarity" with the motion as a Black educator.

During the meeting, Wilson recounted a time when she was reading a book with eighth graders in a classroom and said her students were not familiar with the full extent of Black history and believed it started merely with "slavery."

"Our history does not start with slavery," Wilson said. "And there's just so much more that our young people need to know."

José Luiz Rojas Villareal, a member of the School Committee, proposed expanding the motion to include an Ethnic Studies curriculum - an amendment that was successfully adopted.

After more than an hour of public comment and discussion, the entire motion was passed unanimously.

While Clemente said the motion's passage is a positive step, she added that it is important that School Committee members continue to uplift student voices and extend their commitment to African American studies beyond this singular vote.

"How are we going to work towards this beyond just passing this motion — beyond today?" she asked. "What are we going to do, what steps are we going to take to really see this start, to really make an impact?"

Escamilla-Salomon said this motion presents the Committee with an opportunity to advance the diversity of experiences within CPS classrooms and AP curricula.

"When you feel represented in a classroom, when you feel represented by history, by the story that's being told, you'll show up," Escamilla-Salomon said.

Allston Affordable Housing Raises Displacement Concerns

BY KATE DELVAL GONZALEZ CRIMSON STAFF WRITER

The Boston Planning and Development Agency approved a slew of affordable housing across four sites in Allston-Brighton last week, though some local artists took issue with the displacement of studio space.

All four developments are set to include affordable housing units, with three offering properties for ownership - together bringing nearly 500 new affordable residences to Allston-Brighton. The approvals come amid an affordable housing crisis in the neighborhood, which some residents have tied to Harvard's Allston expansion projects.

The BPDA Board of Directors met on March 16 to review development plans and hear public comments from residents. The board approved projects at 1234-1240 Soldiers Field Rd., 119 Braintree St., 52 Everett St., and 75 Tremont St., as well as four developments outside Allston-Brighton. The Davis Companies are set to invest \$366 million into the redevelopment of 1234-1240 Soldiers Field Rd., the former home of the Boston Skating Club. The site will include three residential buildings, comprising around 450 residential units, with 148 units of affordable housing as well as retail space and a hotel.

Resident Leonid Ostrovskiy, supported the project, adding that the old building's removal was long overdue.

"This site increasingly needs to be redeveloped and upgraded, as it's an eyesore to the community," Ostrovskiy said.

The development at 75 Tremont St. will incorporate approxi-

mately 82 affordable units, while the 52 Everett St. project, located in Allston Yards, will offer about 174 affordable housing units. Both are set to include new Bluebikes stations.

The project at 119 Braintree St. will include a 12-story building with lab, research, and office space and first-floor retail and restaurant space, as well as a residential building with affordable housing. The buildings will consist of roughly 88 rental units, 74 of which will be income-restricted. During public comment for the Braintree St. proposal, many artists came forward, some supportive and others apprehensive.

David Jackel, who co-runs a video production company out of 119 Braintree St. with his wife, Shana Bethune, said he is concerned for the future of the arts in Boston.

"Shana and I were saddened to learn about the plans to demolish this special building and displace the unique community that's thrived here for decades," Jackel said. "We are also concerned that this project, and similar projects, will cause irreparable damage to the rich, artistic, and creative culture of Boston."

Allston-Brighton artists have complained that local trends are driving out the neighborhood's historic arts scene, with the displacement of several studio spaces in recent months. The neighborhood's Sound Museum, a longtime rehearsal space for area musicians, announced plans in December 2022 to close as their building is replaced with a biotech research complex.

Nile S. Hawver, a Boston-area artist whose photography studio is being displaced by the 119 Braintree St. project, said in an

interview that despite the inconvenience to him, he supports the creation of affordable housing.

"I'm a huge proponent for affordable housing and just housing in general. The city desperately needs it, but you know, obviously, the unfortunate byproduct of that is that I needed to find a new studio." Hawver said.

Hawver added that developers should take into consideration the needs of local artists when designing new properties, explaining that most rental spaces are "not very large."

"Anything that was suitable for my needs, or often the needs of artists, would be significantly larger than any one person could afford or need," Hawver said.

Escamilla-Salomon said this motion presents the Committee with an opportunity to advance the diversity of experiences within CPS classrooms and AP curricula.

When you feel represented in a classroom, when you feel represented by history, by the story that's being told, you'll show up," Escamilla-Salomon said.

Danez Smith Conjures Worlds of Possibility

BY EMMA E. CHAN CONTRIBUTING WRITER

oet Danez Smith perched precariously on the arm of a couch, chatting with students before their scheduled reading on March 1. On this chilly Wednesday, students, faculty, and visitors alike poured into the space as the sky outside the windows bruised to night. Even before the reading began, the Barker Center's Thompson Room hummed with conversation, warm light spilling from the chandeliers. The excitement only intensified with Harvard Professor of English, Stephanie L. Burt's, enthusiastic introduction of Smith and their award-winning collections, "Homie" and "Don't Call Us Dead." Smith has won the Forward Prize for Best Collection, the Minnesota Book Award in Poetry, the Lambda Literary Award for Gay Poetry, and the Kate Tufts Discovery Award. Besides their achievements, Burt focused on Smith's searing emotional impact. "What has reading so much Danez Smith done to me?" Burt asked the audience as she analyzed her favorite Smith poems, including an innovative list poem titled "depression food" which culminates in "consolatory sex." The emotional appeal that Burt identified - sometimes relatable, sometimes fiercely personal - transformed Smith's already powerful poems into forces to be reckoned with.

Smith is a poetic innovator, expertly shaping form and altering conventions to fit their purpose. Instead of the typical reading structure, which Smith identified as more like a lecture than a conversation, Smith redefined their reading as a collective, shared experience and encouraged the audience to respond to their works together. "Poems, for me, are better

when there is a sense of connectedness between me and you. I know some of us were trained to wait until the end of the poem to show a sign that you were excited or moved by it, and I don't like that," Smith said, even encouraging members of the audience to hold hands. "You can be here together, for a little bit.' Smith maintained this "sense of connectedness" between author and audience throughout their reading, fueled by their own incessant energy and enthusiasm. Smith's incredible written work gained a new charge when read aloud, suffused with a pervasive, infectious joy. As Smith read "My President," the opening poem from "Homie," their achingly emotional delivery pulled the audience out of their everyday lives and into a world of Smith's creation, where "the boys outside walgreens selling candy for a possibly fictional basketball team" were their presidents. Smith's voice was sometimes tender and confessional, while at other times desperate and pulsing with urgency. Smith's intense imaginative power allows them to push against the reality we live in.

Many of their poems discuss police brutality or gun violence, and navigate the complexities of Smith's Black and Queer identities. In particular, the poem "how many of us have them?" simultaneously celebrates friendship and mourns the dead, sliding seamlessly from self-deprecating jokes to scraping grief and back again. As Harvard Professor of English and African and African American Studies Tracy K. Smith expressed, Smith's emotionally expansive poems move us through many different stages of revelation," as if each poem is composed of "seasons." "the wind is tangled / with the dust of the dead homies, carrying us over / to them, giggling in the mirror. hear them. hear," Smith read from "how many of us have them?" This heart-wrenching juxtaposition of joyful memory and hollowing grief was made all the

ment to their emotional range.

Smith's other poems touched on sexuality, race, love, and the body, often collapsing these palimpsestic topics into a single, moving moment. "How many people have somebody in their family that you love but once they're dead, life might be a little easier? Great, so everybody raised their hand! The queer mixer is next door," Smith quipped before reading "waiting on you to die so I can be myself." In "Tonight, in Oak-

a male's body experience, unapologetically."

COURTESY OF EMMA E. CHAN

THE HARVARD CRIMSON

MARCH 24, 2023

Burt also expressed her appreciation for the transformative experience of reading Smith's restless, ever-shifting poems, especially from an identity that differs from her own.

"I'm super into the micro-pivots that their lines make," said Burt. "My life experience is really different from theirs and reading them, I have this experience of, 'they're speaking to me, they're not speaking to me, they re speak ing to someone else,' and it's amazing to just be in the room and lis-

there is a sense of connectedness between me and you.... You can be here together, for a little bit.

more tragic by Smith's delivery, the repetition of "hear them" both a plea and a promise. Within a single line, Smith channeled both joy and sorrow, grief and hope, love and longing, an inimitable testa-

land, a lover proclaims to Smith, "I want to take you/how the police do, unarmed & sudden." These stunning lines, coupled with the ten." poem's wishful, anaphoric litany of "tonight," laid bare the synergy between grieving racialized violence and celebrating one's iden-

ed with Smith's raw depiction of their Black Queer experience. "I'm in awe of how honest and brave they are," Terry said. "There aren't many places I can find a true depiction of a Black Queer person in

Even while embracing complex emotions, Smith is insistent on remaining hopeful, and shifting the onus of affirming identity away from marginalized communities.

"I do want to argue for a better world, but I don't need to argue that I matter. I want to move past that," Smith said, reflecting on their earlier tendency to write as an affirmation of their identity. "It's unfair to ask any writer or artist to bear the brunt of all the complications of the world. We've just got to do our fucking work."

While they recognized the challenges of writing from – and about - marginalized identities, Smith ended by dwelling once again on poetry's ability to make the possible tangible, to draw it close.

"The poem's generosity is its porousness; it can hold so many things that it can be a space of conjuring things into life," Smith said. "The generosity of the poem is the generosity to continue to dream."

'The Great Leap:' A High-Stakes Game of Family History

BY SOPHIE H. KIM

CRIMSON STAFF WRITER

Intergenerational trauma. Found family. Extremely creative insults. What's not to like? The Lyric Stage Company of Boston's production of "The Great Leap," which ran from Feb. 24 to March 19, brings all of these and more to the basketball court. The play, written by Lauren Yee and directed by Michael Hisamoto, is ultimately a story about how to take control of your own narrative, which asks: What is it like to spend your whole life standing still, and how do you learn to move?

Set in San Francisco in 1989, "The Great Leap" follows Manford Lum, a Chinese American basketball player with a chip on his shoulder; Saul, his cynical white coach; and Wen Chang, a Chinese national coach with a hidden past. Manford manages to get himself a spot on an American basketball team to play a "friendship" game in Beijing, but finds himself caught up in his family history and questioning what it means to be both Chinese and American.

Yee's script is the backbone of the production, peppered with salaciously out-of-pocket wordplay and buoyant moments of camaraderie. The dialogue is fresh and alive; characters roast each other with delightful wit, only to turn around and say something so sincere it hurts. Yee also pokes fun at the audience's preconceived notions about the sanctity of religion and politics in China – for example, the show is peppered with tongue-in-cheek references to Mao Zedong. A Chinese character will say, seriously, "To quote an old Chinese proverb..." Pause, then finish, "What bullshit!"

Such unexpected turns aren't just funny; they also make the play feel self-aware of the expectation placed on it — not just to entertain, but to educate. Perhaps in another play, a character would seriously explain an old Chinese proverb to an audience waiting to be praised for watching something educational. However, Yee instead chooses to explore the ideological differences between the two countries, and what it means to be shaped by both, in a funny, nuanced, and ultimately heartbreaking way. The performances are all

strong, with each actor bringing playfulness, nuance, and gravity. But Gary Thomas Ng stands out, bringing a quiet, soft-spoken, yet powerful quality to Wen Chang-a character whose anger and despair are always simmering beneath the surface. These two emotions are hidden so well

that the audience almost forgets they are there, until the moments when Ng tactfully brings them out.

While portrayals of Asian masculinity as soft and "feminine" have historically been criticized for being racist, Ng's portrayal of a softer, gentler, yet still forceful masculinity is a subtle, vet important moment for Asian male representation. In contrast to Saul, the brash, in-yourface, hyper-masculine American male coach who's always yelling or cursing at someone, Ng's character shows that Asian men don't have to prove their masculinity by acting like white men. In a story where proving your toughness is inextricably tied to proving your worth as a father or son, this kind of portrayal onstage allows for more expansiveness around what Asian masculinity can look like.

The production's set design, lighting choices, and the layout of the space heighten the emotions of the play. Seats are arranged against three of the four sides of the stage, making the theater feel more like a stadium than a traditional proscenium. Manford says he wants to "sit courtside" for a close view of history being made. Due to this seating arrangement, the audience feels like they are doing exactly that. The brick walls and wooden floors are designed to make the space feel like a rundown gym: stifling, claustrophobic, familiar. The space reflects Manford's state of mind – he's stuck in his hometown and wants to get out, yet always finds himself returning to the basketball court, whether in San Francisco or Beijing.

These design elements come together in a dramatic, almost ethereal flourish at the play's

close. Wen Chang is sitting alone in his sterile apartment in Beijing, looking down on the Tiananmen Square protests. The play's set lives in the land of realism real gym benches, real basketballs, hyper-realistic brick walls and windows. However, as Wen Chang prepares to leave his apartment, enter the protests, and face violence and certain death, a door in the middle of the stage swings open - a door that's been there the whole time, but has never been opened. Golden light glows within it — it's impossible to tell where it leads. If it even ends, or just keeps going. In a play grounded in the smack of a ball hitting the floor, we feel, for a second, weightless. For a moment, the curtain lifts, and we glimpse the unknown and the unearthly. And then the lights go out.

Cody Ko on YouTube Channel and Staying Motivated

BY STELLA A. GILBERT CRIMSON STAFF WRITER

or Cody Ko, energy is everything. In the early morning, he reaches for his camera, recording himself as he makes subpar oatmeal - which he affectionately calls "b'doats"— and slaps on self again," said Ko, grinning. "It his baseball cap that reads "Energy is Everything." Then, he trains. Whether running dozens of miles, spending hours on the bike, or swimming along the California coast before sunrise, Cody Ko trains for his next endurance challenge nearly every day and vlogs while doing it, uploading videos to his newest YouTube channel: "Cody Trains." Cody Kolodziejzyk - known to his fans as Cody Ko — is a media professional, with popular podcasts and YouTube channels that regularly garner millions of views. His newest venture veers away from his typical comedic reaction videos and music content, instead focusing on amateur endurance training. Ko started training about a year ago. "I was in a super bad rut," said Ko in an interview with The Harvard Crimson. "I've always been a pretty optimistic and happy person, and I just hadn't felt like that for a long time." Ko was a D1 college diver at Duke University and

grew up in a family full of athletes. "I used to watch my family do all sorts of incredible endurance feats. And I realized I'd kind of lost that part of my life."

His response was to sign up for a 60-kilometer ultramarathon, beginning a pattern of endurance training that he has maintained consistently since.

"I feel like I kind of found my-

"In the comments, people were saying, 'this encouraged me to start running,' or 'I had never done anything before, but I got off the couch and I went outside for a walk," said Ko. "I go back and watch that ultramarathon video sometimes, just to see how I was feeling, and to remind myself what effect that had on my life."

Energized by the success of his ultramarathon video, Ko started his separate "Cody Trains" chan-

nel in September of 2022. His

content embraces imperfection

and even failure as it follows his

and screw something in for an hour trying to figure out how a bike works.'

However, Ko has persisted in his Ironman training, weathering bike maintenance, injuries, and other challenges as his fans cheer him on from his comment section.

"Nothing is consistently, linearly up," reflected Ko. "I've learned to deal with that with this career especially; it's peaks and valleys, peaks and valleys."

By confronting challenges head-on with his channel, Ko has inspired his viewers to do the same. His comments are flooded with positive reinforcementnot only for himself, but for other members of his community. This positive community even reached Ko in person.

"When I was in Palm Desert for my wedding, I went for breakfast with my wife Kelsey," said Ko. "And we bumped into a girl who told me, 'I watch your "Cody Trains" videos, and it's changed my life. My brother, who is severely depressed and hasn't gotten out of bed in months, is now getting up every morning and training because of your videos." Ko paused. "Kelsey and I just started crying because that's the nicest thing I've ever heard. That just makes me want to go harder and keep doing this sort of stuff."

"Cody Trains" is more than inspirational: It's funny. Ko injects humor and running jokes into every aspect of his videos. For instance, his now-classic tagline "energy is everything" came from an old hat he found abandoned in his house.

"I thought the phrase was pretty corny, and who left his hat here? It's not mine," laughed Ko. "But then I just started saying it. And now it's become this thing that ties the channel together."

Although the blend of humor and motivation is intentional, it is also natural for Ko, who is experienced in the digital media.

"By now, when I pull out a camera, it's kind of second nature to try and be a little bit performative," said Ko. "I'm only really vlogging maybe three minutes a day, so it's not a lot to try to think of a funny loke in there. That's what I've always tried to do in my content-make people laugh."

EDITOR'S PICK

HANNAH WHITTEN ON NATURE, RELIGION, STAR WARS.

COURTESY OF CALEB WHITTEN

Hannah F. Whitten is making a name for herself in the world of fantasy literature, writes contributing writer Rachel A. Beard. Whitten is a Nashville-based author who recently released her third novel — and the first in her upcoming "Nightshade Crown" trilogy — "The Foxglove King," an enthralling fantasy that follows Lore, a witty and enjoyable 23-year-old spy imbued with death magic, as she tries to infiltrate the royal court of the fantastical city Dellaire and solve a mystery.

For Whitten, the most rewarding aspect of writing as a career is sharing her stories with the world — connecting with a community of readers who can find solace in escaping to her fantastical worlds. When asked what message she would like readers to take away from "The Foxglove King," she said, "Where you come from doesn't dictate where you are going, even whenever it feels inescapable."

washt just specifically going out and running, it was more about being able to trust myself again, that I'd actually show up for myself and complete these workouts and finish something diffi-

anything.

A24 — COURTESY IMAGE

"Pi: 25th Anniversary Re-Release" probably should not exist, writes contributing writer Joseph A. Johnson. Without A24's recent dominance of the independent film market and an offhand deal made by director Darren Aronofsky a quarter of a century ago, this remastered version of "Pi' would live only in the heads of the most die-hard cinephiles. Following "mad genius" Maximilian Cohen in his relentless search for mathematical patterns in the world around him, "Pi" was a mostly forgotten black sheep of the 1998 Sundance Film Festival.

That is, until Aronofsky's most recent effort, "The Whale," catapulted both himself and actor Brendan Fraser, who won "Best Actor" at the 2023 Oscars, into the Hollywood limelight. So, when the rights to "Pi" serendipitously reverted back to Aronofsky this year, it only made sense for A24, the production company behind "The Whale," to re-release Aronofsky's mathematics-obsessed debut on Pi Day at IMAX theaters across the country.

The 95th Academy Awards: A Star Is Re-Born

BY AVERY BRITT CRIMSON STAFF WRITER

To understand the trend of the 95th annual Academy Awards, we must first go back to the 27th Academy Awards, when Judy Garland, a fading child star, sat in her hospital room. Garland's new film, "A Star Is Born," was her last chance to reclaim the spotlight a task which seemed reachable, as she was not only the favorite to win Best Actress in 1955, but seemed so guaranteed to win that NBC cameras filed into her room to capture the moment. However, another name was read and a new star was born: Grace Kelly. With that, the camera crew left and closed the door of Judy Garland's major acting career — out with the old and in with the new.

After 68 years, the same trend has seemingly arrived again. Michelle Yeoh, at 60 years old, is one of the oldest actresses in her category, but was again a favorite for best actress. Seated in the first row, with her category being announced by historic winner Halle

Berry, auspicious signs presented familiar circumstances, but, this time, the narrative changes: She won. Not out with the old, but not out with the new either.

Ko completed the challeng-

ing ultramarathon in August of

2022 and uploaded a video about

his journey to his main You-

Tube channel, which resonated

strongly with his viewers.

From the Cocaine Bear to a star-studded rendition of "Happy Birthday," the 95th annual Academy Awards were full of new surprises — but the greatest part of this year's honors were the seemingly predictable wins giving way to new representation. "Everything Everywhere All At Once" has been both a critic and fan favorite since its release as a summertime blockbuster. All the major media outlets forecasted its Oscar dominance, but not even the seemingly most certain prediction is guaranteed.

As seen in the dominance #OscarsSoWhite over the last decade, the Oscars have a persistent problem with diversity. So when a film with abundant representation is nominated for an Academy Award, it has the potential to go the way of Judy Garland – making all the top ten Oscar snubs lists rather than walking away with the big prize. However,

this year's Oscars allowed "Everything Everywhere All At Once" to fulfill the predictions and make history while doing it.

The success of "Everything Everywhere All At Once"'s success is a win for Asian representation. This is the first time that multiple actors of Asian descent have won in one year, and Michelle Yeoh's

The Academy awarded actors who have been working for decades to gain their footing or be respected in the industry.

dustry.

victory makes her the first Asian American actress to ever win Best Actress. While Asian people finally being recognized is the most important accomplishment of the night, something that Yeoh noted in her acceptance speech establishes another evident 2023 Oscar's thread: The old

Moreover, while Michelle Yeoh aimed her directive to the older women in the audience who, like Judy Garland, have consistently been passed over for younger women in Hollywood, Oscars' night saw men claiming that narrative as well. Ke Huy

Quan, a former child actor won best supporting actor, and Brendan Fraser, a since forgotten '90s heartthrob, made his leap back into prominence by winning best actor for his role in "The Whale," beating early favorite "Elvis"'s Austin Butler, a comparatively young actor.

The big winner of the night teaches us what success Hollywood can find when it embraces its originality again; but in a world where two of the best picture nominees are sequels and lackluster remakes reign supreme, how can you make a classic into something inventive and relevant? The answer might lay in the second most popular winner of the night, "All Quiet on the Western Front."

While the film is very different from both its book and the original 1930 production, "All Quiet on the Western Front" deserves its own praise for bringing this story to a modern audience. The original film was a sensation in its time because of its innovative techniques to showcase the horror of war, including the use of sound,

but a modern audience watching the original picture with a knowledge of contemporary amenities like visual effects would find it difficult to understand the visceral, shocking nature of the original picture. Thus, the movie's intention is lost with age. It is for reasons like this that remakes should be considered. While the film does not share many similarities with its original source material, it is a successful example of how modern technology can help recontextualize timely classics for a modern audience.

Overall, the 95th Annual Academy Awards appear to have been the perfect amalgamation of the old and the new. It avenged Judy Garland's loss by giving oldguard actors waiting for deserved success their wins. It also offered a needed reimagination of a classic Hollywood success. As the Academy nears its 100th year, the appreciation for what has come before and what Hollywood's past could lend to its future is more important than ever,

14 FIFTEEN QUESTIONS

teven Levitsky is a Harvard professor of Government and Latin American Studies who serves as the director of the David Rockefeller Center of Latin American Studies. He co-authored "How Democracies Die" with fellow Harvard Government professor Daniel Ziblatt.

FM: How did you come to study Latin America?

SL: I studied Spanish in high school. I've always been interested in politics, but I was attracted to Latin American politics in part because I spoke some Spanish, but in part because when I was roughly your age — late high school, early college — Central America was a very, very hot issue in the United States. It was the mid and late 1980s and there'd been a revolution in Nicaragua, there were civil wars in three of the five countries in Central America, it was front page news.

And I basically got initially involved more as an activist, someone who was critical of the Reagan administration's policies in Central America, and then when I got to college, I was able to take some classes in Latin America and fell in love with the region.

FM: While you were at Stanford, you were involved in apartheid divestment protests against South Africa. What was that like?

SL: It was how I cut my teeth in politics. It was my first activist issue. As a high school student, there were anti-apartheid or pro-divestment protests at Cornell, and so that was the first issue I ever got involved in.

As you get older, you realize the world is full of grays and not

It's the pure good versus the pure evil, and as you get older, you realize things are much more complicated.

Q&A:

STEVEN LEVITSKY ON DEMOCRACY, LATIN AMERICA, AND THE METS

THE POLITICAL SCIENTIST sat down with Fifteen Minutes to discuss threats to democracy in the United States and Latin America. "Democracy is always an unsettled system," he says. "It's always going to be open to threats and so it requires a tireless fight."

BY CHARLOTTE P. RITZ-JACK CRIMSON MAGAZINE ASSOCIATE EDITOR

THE HARVARD CRIMSON MARCH 24, 2023

cy Reached The Breaking Point."

It's not terribly optimistic. I mean, it is very good news for American democracy that Donald Trump lost the 2020 election, and we are in better shape now as a result.

Had he been reelected, I think we would have been in some serious trouble. But Daniel and I think — and we're going to argue in this book — that some of the underlying conditions that caused the crisis of the last five years, they've not gone away.

It's not terribly optimistic. I mean, it is very good news for American democracy that Donald Trump lost the 2020 election, and we are in better shape now as a result.

In particular, the radicalization of the Republican Party continues, and some of our country's very old institutions, which are very, very counter-majoritarian, much more counter-majoritarian than other established democracies in the world, are protecting and empowering what is essentially an authoritarian minority party.

So the threat of another round of democratic crisis continues to be pretty high.

FM: What are some ways you like to spend your time outside of the classroom?

SL: I am a big sports fan for one. So whenever New York sports teams are on television, I'll be there watching.

FM: What sports teams?

SL: I'm a big Mets fan in baseball. Rangers and Knicks. Little less in football, but a big big sports fan. My wife and I love to travel so whenever we get a chance we travel, trying to visit new countries everywhere in Latin Amer-

so many black and whites. And when you're young, when you're 17 or 18 or 19, you see the world in much more Manichean black white terms. It's the pure good versus the pure evil, and as you get older, you realize things are much more complicated, but not that one. I mean, that was just really clear in terms of what was ethically right and what was ethically wrong.

FM: I've heard you've met Fidel Castro once. Can you tell me more about that?

SL: Early 2000s, we were invited to be a part of an observer mission at the Ibero-American Summit in Panama, the summit for all the Latin American presidents, and there was an incident in which a Cuban exile apparently tried to get in the country with a Salvadoran passport allegedly to try to assassinate Castro.

And so there was a press conference, and my wife is a journalist and we used her press kit credentials and got into the press conference. And Fidel was in classic form, going on for hours and hours about what the CIA did in 1976 and just ranting for a very long time.

After the press conference, pandemonium broke out, and my wife and I were basically standing in a hallway and out of a crowd of people — it was as if the Red Sea had parted — and suddenly Fidel Castro was marching right towards me. Not because he wanted to see me, he just happened to be walking in my direction, and I stuck out my hand and said, "Hello," and that was it.

FM: In addition to being a professor, you're the director of the David Rockefeller Center for Latin American Studies, which sponsors many opportunities for students to spend time abroad in Latin America. Why do you think it's important for students to spend time abroad?

SL: I have a real personal connection to that.

For me, I would not be doing what I'm doing today had it not been an opportunity as an undergraduate to go to, in my case, Central America, to travel to Latin America, to study Spanish, to do summer research for my thesis. My summer in the summer of 1989 doing senior thesis research in Managua, Nicaragua, changed my life. I mean, I'm doing what I'm doing today because of the opportunity I had in college to travel to Latin America.

66 I have a real personal connection to that.

For me, I would not be doing what I'm doing today had it not been an opportunity as an undergraduate to go to, in my case, Central America.

FM: You've co-written books and articles with fellow Harvard Government professor Daniel Ziblatt. How did you guys become collaborators?

SL: Well, we met in graduate school. We both studied at UC Berkeley together. He arrived at Harvard a few years after me. But, since we already knew each other, and we both studied comparative politics, and we had some of the same professors at Berkeley, I think I probably got to know him better than some of my colleagues.

But what happened is when the 2016 presidential campaign started, he and I basically started having watercooler conversations, and we started talking in the hallway, or there used to be a cafeteria across the street in CGIS back before Covid.

During the campaign, we basically just started shooting the shit in the hallway and realized that what we were seeing early in the campaign was reminiscent to both of us of things we had seen in our own region, not in the United States, but him as a Europeanist who's spent a lot of time studying the breakdown of democracy in Europe in the 1920s and 30s, me as a Latin Americanist, who had spent time studying the breakdown of democracy in the earlier periods in Latin America in the 60s and 70s.

And we both felt, having very different experiences studying different parts of the world, that this was a movie that we'd seen before and that most Americans hadn't seen.

I gave a lecture the day after the election, or two days after the election, and I didn't know what to say and I didn't want to be too partisan,

and I decided not to say anything. And after that lecture, a student came up to me and just ripped the shit out of me and told me, "You need to see something, you're an expert on democracy and you didn't say anything."

Democracy is always an unsettled system. It's always going to be open to threats and so it requires a tireless fight.

So the next lecture, I gave a 20 minute mini lecture on what this means for American democracy, and that was a kernel of the op-ed that Daniel and I wrote, which eventually became the book "How Democracies Die."

FM: Even post-Trump, discourse about the fate of American democracy still circulates. Are you optimistic?

SL: Well, actually, Daniel and I are writing another book. We're finishing it up right now, and it will be out in October. It's called "Tyranny of the Minority: Why American Democra-

ıca.

One hobby that probably most people don't know I have is I'm a big bird watching fan. I like birds.

FM: Has studying declines in good governance been demoralizing?

SL: Yes and no. Sometimes it is, when particularly countries that I know, and have lived in, have studied, and care about, when they experience democratic reversals it can be hard.

When I first started studying democracies in Latin America and elsewhere in the world — it was the mid 1980s. And we continue to be in a much better place in the world today than we were back then. The reason I'm in this business, the reason I study democracy, is I had the fortune — I don't know if it was good fortune or bad fortune — but the fortune, to be wandering around Central America in the 1980s and seeing firsthand what the absence of democracy is like.

What authoritarianism, and military rule, and real human rights violations are like. What it's like to not have democracy. And one, that has inspired me my whole life to work to find ways to make democracy succeed. But it also, it reminds me that even today, we're in a much, much better place than we were back then.

And, it reminds me that democracy is always a struggle. There always are setbacks. Democracy is always an unsettled system. It's always going to be open to threats and so it requires a tireless fight.

WIN OR GO HOME No. 7 Harvard men's ice hockey starts its NCAA tournament run on Friday afternoon against Ohio State.

BY AARON B. SHUCHMAN CRIMSON STAFF WRITER

ll roads have led to this. After its best regular season campaign since 2016-2017, the No. 7 Harvard men's ice hockey team will look to kickstart a championship run against the No. 8 Ohio State Buckeyes on Friday afternoon in Bridgeport, Conn.

Behind the bench, the Crimson is steered by Ted Donato '91, who will make his eighth NCAA tournament appearance in his 19th season as head coach. On the ice, Harvard is captained by three seniors: defenseman Henry Thrun, forward Baker Shore, and forward John Farinacci. Farinacci missed the first half of the season due to injury before returning in January.

"We certainly start the year out with goals and hopes and expectations," said Donato at the end of the regular season. "We know everybody starts on even footing in the playoffs, and it's always difficult to try to end somebody's season and move on. It's something that we've talked a lot about throughout the year trying to get ourselves to a point where we could play our best when it mattered the most."

At forward, the Crimson's top six is loaded with star power. Junior Sean Farrell, the ECAC Player of the Year, led the team with 52 points (20 goals, 32 assists) on his way to being named a Hobey Baker Award top-10 finalist. Farrell's linemate, sophomore Matthew Coronato, tallied 20 goals of his own en route to a spot on the All-ECAC Second Team. Junior Alex Laferriere joined Coronato on the Second Team after leading the team with 21 goals, while firstyear Joe Miller earned a unanimous spot on the ECAC All-Rookie Team with 28 points (13 goals, 15 assists). On defense, Harvard is backstopped by Thrun, who won the ECAC Howies Hockey Best Defensive Defenseman Award. Firstyear Ryan Healey earned a spot alongside Miller on the All-Rookie team, and senior Ryan Siedem and sophomores Ian Moore and Jack Bar provided a steady presence in the top four. In net, senior Mitchell Gibson turned in the

finest season of his career, posting career-best marks in goalsagainst average and save percentage and winning a spot on the All-ECAC Second Team.

"We're definitely a pretty offensive team, but I think we know the kind of style we need to play to win big games," said Laferriere at the end of the regular season.

Despite the Crimson's infrequent competition against the Big Ten Conference, the squad still has some familiarity with the Buckeyes, both through recruiting and competition in the USHL, the United States' top junior hockey league. Ohio State's attack is led by freshman Stephen Halliday, a draft pick of the NHL's Ottawa Senators and a USHL alum, who tallied 40 points (nine goals, 31 assists) on the season. Halliday and goaltender Jakub Dobes were All-Big Ten honorable mentions, while forwards Jake Wise and Mason Lohrei, the squad's second and third leading scorers, respectively, were named to the All-Big Ten Second Team.

"There are a lot of their players that we have some familiarity with as far as recruiting goes and watching other college games during the season...but certainly not a team that we are familiar with from a style standpoint," Donato said. "That's something that we'll get on the video and on the phone and figure out what makes them successful."

Ohio State's game pounds opposing goalies with shots, as the Buckeyes average over 36 shots on goal per game while conceding under 29 per game. Ohio State's penalty kill is the best unit in the country, shutting down opposing power plays at an eye-popping 89.5% clip. However, the Buckeyes are also one of the weaker faceoff teams in the nation, with their faceoff win percentage of 47.8% ranking 44th out of 60 teams.

Ohio State began the season

get-

at the hands of Minnesota, but they rebounded to advance to the Big Ten Tournament semifinal, where they lost 7-3 to the Wolverines.

The Crimson began the season with seven consecutive wins, including six over ECAC competition. The stretch matched the program's best start to a season since 1989, when Harvard won its only national championship. In a trend that defined the Crimson's campaign, the squad overcame deficits in three of its early wins, rebounding from slow starts to top Dartmouth, Princeton. and RPI.

After a perfect 7-0-0 start on the East Coast, Harvard headed to the midwest for a two-game set against then-No. 5 Michigan, an out-of-conference foe loaded with NHL-caliber talent. After battling to a 4-4 draw in the first game, the Crimson suffered its first defeat of the season the next night, falling 4-1 to the Wolverines despite putting up 40 shots on goal. However, Harvard responded to the defeat less than a week later, claiming a 2-1 overtime victory on the road at Cornell's Lynah Rink, with Farrell scoring the game-winner. The next night, the Crimson were stymied by Colgate goaltender Carter Gylander, whose 36 saves preserved a 6-4 victory for the Raiders, sending Harvard into the midseason break with a record of 8-2-1.

"It's a pretty resilient group," Donato said. "We've won some games in overtime, we've had some comebacks, we've had some injuries throughout the year, so we've had all sorts of people step up under those conditions."

The Crimson returned to play on Dec. 30 at Boston University's Walter Brown Arena for a top-10 showdown with the Terr i

first overtime shift of the season, sending Harvard to the championship game.

In a tight and emotional Beanpot title game, the Crimson and the Northeastern Huskies fought to a 2-2 draw after 65 minutes of play, sending the game to the first decisive shootout in Beanpot history. Star Harvard forwards Farrell, Coronato, and Laferriere couldn't beat Huskies goaltender Devon Levi in the first three rounds, while Northeastern captain Aidan McDonough scored the shootout's only goal, winning the Beanpot for the Huskies.

Despite the heartbreaking defeat, the Crimson rebounded to sweep its final four ECAC games to secure the conference's second postseason seed, guaranteeing a first-round bye and a home series in the quarterfinals. After emerging from its two week break, Harvard swept Princeton in two 6-1 victories to advance to the semifinals against Cornell in Lake Placid, N.Y. In the season's third faceoff between the archrivals, the Crimson emerged with its third victory, as Laferriere broke a scoreless tie five minutes into overtime to move Harvard to the championship against Colgate.

"I think it was more than half the games we gave up the first goal, and obviously it's good to know that we can come back in those situations, but I think it's super important to get that first goal, especially at a national tournament game," Farinacci said.

The Crimson got off to another slow start against the Raiders, conceding two first period goals before Thrun cut the deficit in half in the second. Colgate answered immediately to restore a two goal advantage, and despite a power play goal from Coronato midway through the third period, Harvard couldn't find the equalizer, and the Crimson ultimately fell one win short of defending its ECAC title.

Despite the tough end to the conference playoffs, Farinacci is motivated to get Harvard into a position to win a trophy after falling just short throughout the season thus far.

"We've come short in the Ivy League, we've come short in the ECAC, obviously in the Beanpot so there's one trophy left to get, and from here on out, it's win or go home."

WOMEN'S LACROSSE

A Turning Point: Harvard Is Hitting Its Stride

BY HANNAH BEBAR CRIMSON STAFF WRITER

After a difficult start to the season, the Crimson has hit pace with three wins in its past four games. In a strong start to spring break, the Crimson traveled to Worcester, Mass. to play Holy Cross and notched its first win on the season with a 15-12 scoreline. Familiar standouts, the junior pair of attackers Riley Campbell and Callie Hem, led the attacking domination with four goals each on the day. The Crimson did not stop there, with flying attacking threats from first-year stars Hannah Shiels and Kate Gilliam.

Harvard traveled south with this momentum to play Coastal Carolina for a Tuesday matchup. Despite being on away turf, the Crimson led the charge from the start, with senior standout Shea Jenkins notching a first-career goal on a spectacular run dicing through CCU opponents to rocket a shot just 12 seconds into the game. The Crimson's strong play continued throughout the 60 minutes, edging past CCU in shots, saves, and draw controls.

Harvard has been extremely powerful off the draw despite the loss of senior Grace Hulslander due to injury. Junior midfielder Maddie Barkate has seamlessly stepped up and dominated on the draw, especially in the team's most recent win against Holy Cross. Barkate reached a career-high of 12 draw controls as well as two goals, demonstrating her versatility and adaptability for the Crimson this season.

The Crimson have shown this resilience and response to adversity as a team, and that is something head coach Devon Wills has emphasized from the start.

"I was really proud of how the team battled both in Holy Cross and in Coastal. We didn't play a perfect game by any means. However, we found a way to regain momentum when the other teams went on a run," Wills noted.

Sophomore midfielder Charley Meier emphasized how important it has been for the team to control momentum and not let the heat of the game affect large swings in possession against the Crimson.

"One of the biggest things in lacrosse is that it is a game of runs. It comes down to who can capitalize on runs — who can score the most off of them or who can prevent the other team from going on those huge runs," Meier commented. "We have been trying to work on managing a lot when we get down by one or two goals, not shifting our morale or spiraling."

The Crimson managed just that - maintaining scores on the board and managing energy throughout the respective games against CCU and Holy Cross.

"Several players stepped up at the right time. In Holy Cross, we had some critical goals at the right time from Ilana Kofman and in Coastal from Caroline Mullahy. Charlotte Hodgeson had a big game at Coastal and Maddie Barkate has really been leading our draw team," Coach Wills said. "Further, in Holy Cross, Chloe Provenzano went in and honestly was a momentum shifter for us in the cage."

The success on the field comes from a strong desire to improve the details in practice, according to junior midfielder Ilana Kofman.

We try to focus on ourselves with the film and the drills we do focusing on what we need to build as a team," Kofman reflected. "Our coaches focus on our game and what we can improve which I really like and I think it helps us not focus on what the other team is doing but lead on the field."

The Crimson has sharpened this mentality of putting the team first and focusing on its potential as opposed to the outside noise a task that most teams do not realize until much later in the season towards post-season play. Meier spoke to the quality of technical improvement in addition to this mentality that has helped the team going forward.

"We are trying to work on our zone and be like a forcefield where we are a huge unit working together. We have been doing a lot of lvls and zone work to be able to hold the dodges a lot stronger," the midfielder said.

The work on the field, coupled with a fresh mentality going into the season post-break, is essential for Coach Wills' team with a string of important Ivy games looming. The Crimson looks to come back from two Ivy league losses, most recently last Saturday to Penn at home, and flip their fortune in the league away at Dartmouth on April 1. With defending champions Princeton coming off an Ivy League loss to Yale, no team is guaranteed a title, and competition is heating up in the Northeast.

The Crimson sealed off its third win emphatically on Wednesday against Merrimack, 20-2, with Hem tacking on five more goals to her already-20 on

the season, making her total of mouth next weekend. The Crim-25 goals a team-high. Big contributions by Campbell, first-year Charlotte Hodgson, and sophomore midfielder Caroline Mullahy added greatly to the win and confidence heading into Dart-

son are firing on all cylinders, and hope to take that momentum to make an impact in Ivy League play.

Harvard Drops Series 3-1 **OFF TO A POOR START**

Harvard baseball has continued to struggle, getting swept by FAU before losing a series 3-1 to Texas A&M-Corpus Christi.

BY JACK CANAVAN CRIMSON STAFF WRITER

he Harvard baseball team continued its uneasy start to the 2023 season in a series against Texas A&M this past weekend, dropping its fourth consecutive series so far this year. The Crimson,

having traveled to Florida to face FAU earlier in the week, took a trip down to Corpus Christi in Texas for another road series.

Matching up for four games against the Aggies, Harvard hit a season low point, losing its March 16 opener 24-3 and extending its longest losing streak of the season to eleven games.

Bouncing back for Friday's doubleheader, Harvard played more competitive ball after losing the first game 4-5, finally breaking the losing streak at 12 games with a 7-3 victory later that day.

After Friday's uplifting win, the Crimson wasn't able to build any more momentum, as Texas A&M closed the door on Harvard in the series' final game, with the Crimson falling 5-3 and bringing its season record to (2-14) overall.

Having played all its games on the road thus far and finding success

When the Crimson took the field, Texas A&M didn't take its foot off the brake - Using an assortment of pitchers, Harvard allowed nine runs in the bottom of the sixth, exiting the inning with Texas A&M-Corpus Christi leading 24-3.

The Crimson ended the game early without another score in the seventh inning by slaughter rule.

Game 2: Harvard 4, TAMCC 5

Harvard rebounded to play a wire-to-wire game on Friday night, losing in crushing fashion on a walkoff by Texas A&M in the bottom of the ninth inning.

Putting Thursday's game in the past, Decker emphasized the team's ability to "have a little bit of resilience" being "able to move on or this game will get to you".

Bats blazing, the Crimson began the game with a bang. After Messevery reached first on a single out of the leadoff hole on a walk, Junior outfielder Ben Rounds cleared the fences on the

66

Bill Decker on Harvard junior starter Jay Driver

next at-bat on an (0-1) count, putting Harvard up 2-0. Senior Logan Bravo also reached base on a single before three consecutive outs closed an eventful top of the first.

Texas A&M carried over their hot hitting from Thursday's game to the bottom of the first, putting two runners in scoring position to open the first before scoring a run oli Harvard starter, junior Jay Driver. The Crimson left the first with a 2-1 lead. The third provided little offensive action for either front. Harvard first-year infielder and pitcher Gio Colosante reached base on a walk with two down before the Crimson took the l field. Driver began

sparingly the Crimson will hope to alter its away game formula before traveling to Philadelphia, Pa. to begin Ivy League play against the University of Pennsylvania.

"We have a good club and we haven't played well for whatever reason," head coach Bill Decker said. "We gotta rally within and play for one another and hopefully we'll see better results moving forwards."

Game 1: Harvard 3, TAMCC 24 //7 Innings

The Crimson bats were alive in the first inning of Thursday's opener against Texas A&M. Leadoff hitter junior Peter Messevery opened the inning by ripping a single on the first pitch of the game. After two quick strikeouts by George Cooper and Ben Rounds, senior clean up hitter Logan Bravo swept Messervy off first base and into home plate, homering to right center to put Harvard up 2-0 before third baseman Jake Berger struck out to end the inning.

Unfortunately, the Aggie bats exponentially outweighed anything Harvard could put forward for the rest of the game. Scoring a run off a wild pitch in the bottom of the first, Texas A&M scratched the scoreboard in the first, cutting the Crimson's short lived lead to 2-1 to end the first inning.

Harvard entered and exited the top of the second in 1-2-3 fashion, grounding out twice before senior Hunter Baldwin struck out swinging to send the Crimson back into the field.

First-year Callan Fang, after making two strong appearances against FAU, struggled with control during his start against TexThe Crimson offense at work against Brown on April 2, 2022. DYLAN J. GOODMAN-CRIMSON PHOTOGRAPHER

as A&M-Corpus Christi. Fang threw his second of four wild pitches on the day during the second early in the bottom of the second, allowing Texas A&M's Christian Smith Johnson to advance to second plate after hitting a single off Fang. With a runner in scoring position, Texas A&M-Corpus Christi proceeded to slash a trifecta of singles to drive in two runs, finishing the second by taking the lead for the first time in the game at 3-2.

The Crimson underwent another quiet inning at the plate in the third, with the exception of Senior George Cooper reaching base on an error before being left stranded at first. The Aggies came up flat as well, leaving the third inning with a 3-2 lead on Harvard entering the fourth.

The top of the fourth saw the Crimson get runners in scoring position on a quick from Logan Bravo, a walk by junior third baseman Jake Berger, and a wild pitch that moved both runners into scoring position on second and third. Three straight strikeouts vanquished any hopes the Crimson had of capitalizing on this opportunity.

Things headed south fast for the Crimson in the bottom of the fourth. Fang continued to struggle with control early in

Baseball

the inning, walking a runner and throwing another wild pitch before an error by Berger opened the door for Texas A&M-Corpus Christi to score their fourth run of the day. Leaving a man on first, Fang was replaced by senior James Kirkpatrick with one out in the inning. In a blur, Texas A&M began an offensive onslaught on Kirkpatrick, scoring six runs before the Harvard pitcher was pulled without retiring a single batter. On the day, Fang finished the game with 3.1IP and 5 ER, while Kirkpatrick was replaced by senior Pryor Thomas, ending the day with 0 IP and 5 ER.

The Crimson had another tough inning at the plate in the fifth, with three quick outs leaving Messervy stranded on second.

The runs continued to pile up for Texas A&M-Corpus Christi in the bottom of the fifth, as Thomas had no better luck than his predecessors in retiring Texas A&M-Corpus Christi batters, allowing five more runs and pushing the score to 15-2 for the Aggies.

Harvard had a brief upwind in spirit in the top of the sixth, with Junior Chris Snopek hitting the Crimson's first home run of the game and cutting the deficit to

Men's Golf

Battle of Rum Pointe

spotless five inning stretch from the second to sixth by retiring Aggie batters in

1-2-3 fashion in the bottom of the second.

Harvard immediately mirrored Texas A&M's quick exit at the plate in the top of the third, compiling three straight outs and sending Driver right back out to the mound, where he continued to dominate the Texas university, closing the third at 2-1.

Harvard's hitters broke the lull in scoring in the top of the fifth. With one down, Messevery ripped a double to left center to give the Crimson a runner in scoring position, and after a flyout by Rounds, Bravo drove Messervy into home off an error committed by Texas A&M, extending the Crimson lead to 3-1.

Driver continued his dominant start in the bottom of the fifth and sixth innings. As Crimson hitters went silent in the sixth, Driver allowed no breathing room for Texas A&M, compiling two shutout innings to close the day with 6.0 IP, 1ER and 6SO, exiting the game in position for the win.

"He's a quality arm that we have and probably one of the better ones in New England." Decker said. "His performance on Friday was really good."

Driver's pitching was deeply missed as the game progressed. After another silent inning Harvard at the plate, the Crimson handed the ball to Senior Tim Williamson to replace Driver at the mound. After getting a ground out from his first batter of the inning, Texas A&M-Corpus Christi hit hard against Williamson, scoring a run and plac-

ing a runner on third off a couplet of hits and a wild pitch. A Texas A&M single brought in the runner from third, tying the game at 3-3 before Williamson loaded the bases and exited the game with 0.1 IP and 3 ER. Senior Harrison Stover replaced Williamson to close out the seventh, minimizing the potential damage by only allowing one unearned run on a wild pitch and retiring three Texas A&M-Corpus Christi hitters quickly to end the inning with Harvard falling behind for the first time in the game at 3-4. The eighth inning kept the same excitement going. Following a strikeout by Bravo, Rounds hit a double to center and advanced to third on a wild pitch by the Aggies. Sophomore Sawyer Feller joined Bravo on the basepath with a walk, giving the Crimson runners on the corners with only one out in the inning before Feller stole second to put two runners in scoring position. Unfortunately, a pop-up and strikeout by Harvard closed any opportunity to capitalize on this scoring chance. Stovern stayed in to shut out Texas A&M-Corpus Christi hitters in the eighth before sending the Crimson up to the plate for a final chance to save the game in the ninth.

MEN'S LACROSSE WINS IVY OPENER VS BROWN

King's OT goal wins men's lacrosse lvy opener. The game marked the highly anticipated lvy League opener for each program. Both the Crimson and the Bears were coming off of bad losses –

For a moment, it seemed as if the Crimson did just that — with Colasante reaching first on an error, Harvard drove in an unearned run through singles by Berger and Bouncing back quickly for the second game of the day, the Crimson stayed hungry to avenge its loss only hours before, doing just that, and maintaining steady control.

Harvard continued its opening inning hot streak, scoring two runs in the first inning for the third time in the series. Quickly down two outs after ground outs from Messervy and Rounds, Bravo continued to contribute extra base hits, slicing a double to right field. Coming off a pitch hit appearance in the start of the doubleheader, Berger launched a home run to left field, putting the Crimson up 2-0 before the inning closed on another ground out.

Junior Chris Clark took the ball to start game three of the series, following up Driver's strong performance with one of his own. Clark retired his first six batters of the day, keeping the score at a 2-0 Harvard lead entering the third, where the Crimson broke the game open and never looked back.

Harvard quickly put runners on the basepath to begin the inning, with Messervy reaching first on a wild pitch on an error, and tom of the inning. t

The Crimson responded in the fourth and fifth by scoring a run in each inning, pushing the lead back up to five at a score of 7-2. Messervy doubled in the fourth and was brought in by a Logan Bravo single, while Colasante brought Berger in off third base on a fielder's choice in the fifth. Clark stacked strong innings on top of his strong early start, shutting out Texas A&M-Corpus Christi from the fourth through fifth innings and letting up an unearned run, ending his day with 6 IP and 2 ER.

Both offenses stayed quiet in the seventh, with the game ending at 7-3 Harvard.

Game 4: Harvard 3, TAMCC 5

In their final game of the series, Harvard played another competitive game, losing contention for the victory in the final innings.

For the fourth consecutive game, the Crimson marked the scoreboard in the first inning, powered by a Peter Messervy double to open the game, which extended his extra base hit streak to three games. Rounds advanced ters faced.

Matson maintained pace through the next three innings of his start, shutting out Texas A&M through the fourth inning and compiling 3 SO and 2 BB in the process.

With the exception of a pair of singles by Baldwin and another by Feller, the Harvard bats stayed relatively quiet through this stretch, with the score sitting at 1-0 until the top of the bottom of the fifth, where the Aggies scored a run off Matson to tie the game at 1-1.

At the top of the seventh, the Crimson stepped up to the plate and tied the game at 2-2. After a single by senior catcher and third baseman Zach Brown, a walk by Snopek, and a Colasante single to put runners on the corners, a sacrifice fly by Baldwin tied the game before the inning ended on a fly out by Messervy.

Relieving Matson for the day, senior infielder and pitcher Will Jacobsen took the ball for the Crimson, putting away Texas A&M in the bottom of the seventh with no additional runs added to the board.

back-to-back errors in the field, the Aggies took a 5-2 lead on Harvard entering the ninth.

In its last chance to salvage the victory, the Crimson came up just short. With one down, a double by Snopek gave Harvard a runner in scoring position, and a flyout by Colasante advanced Snopek to third base. Down to their final out, Snopek scored on a wild fourth ball in an at-bat by Baldwin, cutting the Texan lead to two. Messervy walked in the next at-bat, and another wild pitch to Rounds advanced both Messervy and Baldwin to second and third. With the game tying runners in scoring position, Rounds made contact, but grounded out to second, ending the game and the series in favor of Texas A&M.

"I thought Matson was really good," Decker started. "But we made some miscues and we got to tighten up some things but anyways it's part of the experience of the road run. We just gotta prepare for this week starting tomorrow and just get ready to have our Ivy League opening series against Penn".
