Perfect for one-pot or pan recipes, this cookware staple could be used for a lifetime of meals—and if taken care of—may actually last for a lifetime of your grandchildren's meals as well.

Whether you're looking to serve up a sizzling steak, sauté some veggies or make the perfect frittata, the classic cast iron skillet may be just be your new best friend. This hardy metal cookware is made to withstand high temperatures and can be used on the stove, in the oven or even over an open fire. Cast iron products come in all shapes and sizes, from six-inch pans to face-sized griddles, Dutch ovens and more.

"SEASONING" CAST IRON

Before you get to cooking, though, your cast iron should be seasoned. The same way a guitar must be tuned or stilettos broken in, cast iron products should be seasoned to yield the tastiest results. But we aren't talking about sprinkling on some oregano. SEASONING IN FOUR STEPS

1. Scrub your cast iron with soap and warm water until smooth, then rinse thoroughly.
2. In dry pan with a paper towel or cloth and then place over medium heat on a stove top until all moisture is evaporated.
3. Rub about two teaspoons of vegetable or canola oil into the cast iron using a paper towel. Buff all sides (even the handle) of the pan until it no longer appears greasy.
4. Place the cast iron in a 450-degree oven for 45 minutes to an hour, then allow the cast iron to cool in the oven for an additional 15 minutes with the door closed.

This process will naturally continue over time as buildup from cooking creates a smooth yet tough surface. Basically, the more the cast iron is used, the better it gets.
