'TRICK' or TREAT? leave it on the street

JIWOO HAN

Sports Editor

Recognized as the trademark of the Walt Disney Company's first animated film — "Snow White and the Seven Dwarfs" — the poison apple is more than just a fictional idea, it's a generations-long Halloween legend that's been haunting the American public.

Better known as "Halloween sadism" — the distribution of drug-laced candy during trick-or-treat festivities — the Chicago Tylenol murders of 1982 triggered nationwide alarm over poisoned treats, according to CNN.

Although Joel Best, a University of Delaware professor and researcher on tainted candy indicated a lack of credible relationship between Halloween deaths and laced candy in an Oct. 2 online article by the *Alabama Local News*, United States Drug Enforcement Administration [DEA] officials encourage families to be cautious of a particular candy this Halloween season.
